2020 Fiji Agriculture Census

Volume I : General Table &
Descriptive Analysis Report

FOREWORD

Agriculture Census enables compilation of data at community-level and ensure that issues affecting farmers, farm communities and agricultural operations are included when decisions are made on matters that affect them and their livelihood. It increases the quality of evidence based policy making, guide development of Agricultural Statistics in Fiji and address unprecedented data demand to monitor national targets and Sustainable Development Goals.

Timely and Reliable Statistical information is crucial for the benefit of society and the economy as a whole – not only in policy making and the evaluation of performance, but also in directing economic and social activities and providing valuable data and evidence for analysts, researchers, civil societies and the general public.

On that note, I would like to take this time to sincerely thank Government for the allocation of F\$4.5m, which enable the Ministry to undertake the 2020 Fiji Agriculture Census - the 5th in a series of Agriculture Censuses conducted in Fiji. I also acknowledge UNFAO for their continuous technical guidance to our Statistics Team and the Ministry in ensuring that we successfully achieve expected targets of this Operation.

I hope that other stakeholders and users such as Academics, Tertiary Students, and Consultants etc. will use these reports as basis of any future research and analysis on Fiji's Agriculture Sector.

To my team and all our immediate Stakeholders from Government whose hard work and commitment enables the compilation of these Publications – Thank you so much for your continuous support and I look forward to more future collaboration. It is indeed an honour to be part of this Team and present the 2020 Fiji Agriculture Census Report – Volume 1, 2, 3 & 4.

Vinaka Vakalevu.

Dr Mahendra Reddy
Minister for Agriculture, Waterways & Environment.

PREFACE

The Ministry of Agriculture is pleased to present 2020 Fiji Agriculture Census Descriptive Analysis Report which provides general statistics on structure of Fiji's agriculture sector.

The Fijian Government is mindful of the high demand for agriculture information and the need to establish a sustainable agriculture statistics system that ensures provision of timely and quality agriculture statistics. As such, the conduct of a census and future surveys of agriculture sets the platform for a viable agriculture statistical system. For the 2019/20 financial year, the Ministry of Agriculture had been granted an allocation of \$4.5 million to prepare and conduct the 2020 Fiji Agriculture Census (2020FAC).

The 2020FAC, for the first time, conducted a full enumeration programme of Agriculture Census as compared to previous four (4) Agriculture Censuses conducted in 1968, 1978, 1991 and 2009. All four censuses used sampling methods that limited identification of appropriate methodology for future similar exercises. Therefore, the 2020FAC adopts the full enumeration approach, which marks a significant milestone in data collection transition for agriculture statistics in Fiji.

The census captures all economic activities in the informal sector at the household level in rural and peri urban areas where agriculture (crop, livestock, fishing, forest) is mainly practiced. Fiji, through the Ministry of Agriculture, with technical assistance from the United Nations Food and Agriculture Organization (FAO) Project TCP/FIJ/3703, is responsible for the publication of this report.

The 2020FAC findings presented in this report will provide data users, such as government agencies, institutions, organizations, international agencies, researchers, policy makers and the general public, much needed agriculture statistics for further analysis of the sector.

The Fijian Government is indebted to the technical support of the FAO in ensuring the successful finalization of this exercise and continuous guidance in enhancing statistical capacity in the Ministry of Agriculture.

The successful implementation of the 2020FAC project would not have been possible without the immense commitment, support and dedication of the National Steering Committee (NSC), Technical Working Group (TWG), consultants, regional coordinators, headquarters Staff, area coordinators, field supervisors, enumerators, data processors and support staff involved in the logistical work of the 2020 FAC programme.

Finally, our sincere appreciation to the 71, 631 households within the rural and selected peri-urban areas, for actively participating during this exercise, carried out from 10 – 29 February, 2020, which resulted in the successful execution of the 2020FAC.

Detailed agriculture census information is available online at <http://www.agriculture.org.fj>. If you would like more information, you can also call our help desk by telephone: (679) 338 4233 or e-mail: agrihelp@govnet.gov.fj.

CONSULTANTS OF THE 2020 FIJI AGRICULTURE CENSUS

Technical assistance provided substantial impact to the whole process of conducting and preparing the report of the 2020 FAC. This was mainly offered by FAO through the following consultants:

Name of Consultant	Area of expertise	2020 FAC job title	Areas of technical Assistance
Ms. Helen Stott	Former New Zealand Statistician NZ Bureau of Statistics	Expert on Agriculture Statistics	<ul style="list-style-type: none"> • Advised on the methodology for 2020FAC • Prepared the project training programme • Prepared the data dissemination plan for 2020FAC • Oversaw work on the design of household and non-household questionnaires for 2020 FAC • Worked in collaboration with the expert(s) on CAPI/data processing on the CAPI system for 2020FAC • Provided guidance and on-the-job training to national staff on managing and implementing 2020FAC
Mr. Gene Lorica	Former System Analyst and Officer in Charge of the Assistant National Statistician for Systems Development Division and IT, Philippine Statistics Authority	Expert on CAPI and data processing	<ul style="list-style-type: none"> • Developed requirements for the CAPI system, including questionnaires and validation checks • Supervised the development, operational testing and finalization of the CAPI data collection system for 2020 FAC. • Provided input for manuals and training materials • Assisted in designing of a data processing and tabulation system; • Prepared full technical documentation on the CAPI, data processing and tabulation system. • Provided guidance and on-the-job training to Ministry of Agriculture Statistics Staff on the development and implementation of CAPI, survey solutions, and use of selected software for data tabulation; • Assisted with the planning and conduct of the pilot census (training, operation, technical support, analysis, etc.) • Evaluated the pilot and finalized census methodology, technical support plan, instruments, manuals, etc

CONSULTANTS OF THE 2020 FIJI AGRICULTURE CENSUS (FAC)

Name of Consultant	Area of Expertise	2020 FAC Job Title	Areas of Technical Assistance
Dr. Vidya Dhar	Former Additional Director General, Ministry of Agriculture and Farmers Welfare, Government of India	Expert on Agriculture Statistics	<ul style="list-style-type: none"> • Reviewed progress made in the preparation to agriculture census • Assisted with the evaluation of the pilot census (operation, analysis, etc) and finalization the census methodology, listing frame, plan, instruments, editing specifications, and manuals for the census operation. • Developed methodology for the post-enumeration survey • Provided guidance and on-the-job training to staff on managing and implementing the agriculture census • Oversaw the training of enumerators and initial data collection • Assisted with editing and quality checks • Assisted in evaluating the results of the agriculture census, considering the Census coverage, quality checks, field validation and editing of census tables • Assisted with planning the follow-up statistical activities: reviewing the plan for surveys, updated statistics training and succession plan • Assisted with analysing and disseminating census results, conducted training (remotely) on analysis and report writing oversaw the final editing and the production of clean data • Oversaw work on the preparation of the Fiji Agriculture Census report and assisted in finalizing the report

CONSULTANTS OF THE 2020 FIJI AGRICULTURE CENSUS (FAC)

Name of Consultant	Area of Expertise	2020 FAC Job Title	Areas of Technical Assistance
Ms. Lanieta Makita Vakadewabuka	Former Principal Statistician, Fiji Bureau of Statistics	National Consultant on Statistics	<ul style="list-style-type: none"> Assisted in determining the data items for 2020FAC, using classifications, advised on the census methodology, and assisted in undertaking the user workshop Assisted in designing the household and non-household sector questionnaires and field operation manual Assisted the census staff with the preparation of the main census activity including: <ul style="list-style-type: none"> census public awareness and promotion census field operation recruiting of the census staff
Mr. Waisiki Gonemaituba	Former Chief Economist Ministry of Agriculture		
Mr Lachlan Bruce	Survey Consultant for the United Nations, Asian Development Bank, and World Bank in Asia and the Pacific	Expert on CAPI and Data Processing	<ul style="list-style-type: none"> Launched and deployed final CAPI system for fieldwork. Provided training on CAPI Quality Control to Area Coordinators and Headquarters staff Troubleshoot CAPI issues during fieldwork. Oversaw data cleaning Design of a data processing and tabulation system; Production of final data tables Production of lessons for a remote video based training course on Statistical Package for the Social Sciences (SPSS) Prepared full technical documentation data processing and tabulation system

2020 FAC KEY FINDINGS

Main data items	2020FAC	% share
A household is a small group of persons who share the same living accommodation, contribute their income and wealth to acquire certain goods and services, and share the same eating arrangement. An “agricultural household” is defined as a household where the main economic activity identified is farming, i.e. it practices any agricultural activity (such as crop, livestock, fisheries and/or forestry) during the reference period of the 2020 Fiji Agriculture Census (2020FAC)		
AGRICULTURAL HOUSEHOLDS		
Number of agricultural households		
This comprises 99.1% of the total household interviewed in the rural and part of peri-urban areas where agriculture is commonly practiced.		70,991
• Male head of household	62,546	88.1%
• Female head of household	8,445	11.9%
AGRICULTURAL HOUSEHOLD MEMBERS		
Count of agricultural household members		
81.9% (246,373) of agriculture household members are age 10 years old and older		300,861
• Agricultural number of household members – Male	155,534	51.7%
• Agricultural number household members – Female	145,327	48.3%
Number of agricultural household members who participated in at least one of the agriculture activities: crop, livestock, fishing and/or forestry (age 10 years old or older)		
This consists of 77.3% of the total members of Agriculture Household with 10 years old and above in the rural and part of peri-urban areas where agriculture is commonly practiced.		190,460
• Male	101,338	53.2%
• Female	89,122	46.8%
Number of agricultural household members (age10 years old or older) who participated in crop activities		
A total of 188,768 members participated in at least one crop activity during last 12 months of the agriculture census reference period, representing 76.6% of agricultural household member's age 10 years old or older. This finding is the result of a multiple-choice question, therefore, the number of members engaged in different agricultural activities may not add up to 246,373 (members aged 10 years old or older).		188,768
• Male	100,734	53.4%
• Female	88,034	46.6%
Number of agricultural household members (age10 years old or older) who participated in livestock activities		
		28,719

Main Data Items	2020FAC	% share
A total of 28,719 members participated in at least one livestock activity during last 12 months the agriculture census reference period, representing 11.7% of agricultural household member's age 10 years old or older. This finding is a result of a multiple-choice question, therefore, the number of members engaged in different agricultural activities may not add up to 246,373 (members aged 10 old years or older).		
• Male	24,118	84.0%
• Female	4,601	16.0%
Number of agricultural household members (age10 years old or older) who participated in Forestry Activities	183,129	
A total of 183,129 members who participated in at least one forest activities during 12 months of the agriculture census reference period, representing 74.3% of agricultural household members age 10 years old and older. This finding is the result of a multiple-choice question, therefore, the number of members engaged in different agricultural activities may not add up to 246,373 (members aged 10 years old or older).		
• Male	95,592	52.2%
• Female	87,537	47.8%
Number of Agricultural Household Members (age10 years old or older) who participated in Fishing Activities (10 yrs. old or above)	69,836	
A total of 69,836 members participated in at least one fishing activity during 12 months of the agriculture census reference period, representing 28.3% of agricultural household members age 10 years old or older. This finding is the result of a multiple-choice question, therefore, the number of members engaged in different agricultural activities may not add up to 246,373 (members aged 10 years old or older).		
• Male	37,602	53.8%
• Female	32,234	46.2%
FARMER DEMOGRAPHICS		
A farmer is a member of an agricultural household who identifies farming (crop and/or livestock) as his/her primary or secondary occupation		
Number of farmers in Fiji	83,395	
Out of a total of 190,460 members (10 years old and older) who participated in at least one agricultural activity, 43.8% (83,395) confirmed crop farming and/or raising livestock as their primary or secondary occupation. A total of 101,338 male members and 89,122 female members participated in at least one agricultural activity but only 70.5% of males and 13.4% of females considered crop farming and/or raising livestock as their primary or secondary occupation.		
• Male	71,424	85.6%
• Female	11,971	14.4%
Number of Farmers by Age Group	83,395	
The modal age of farmers lies in the age group of 30–39 years, having 22.4% of the total farmers, though a little over 15.4% (12,853) of the farmers are age 60 years or older. There are 42.7% (35,388) of farmers in the age group of 10 to 39 years old while 57.3% (47,807) are age 40 years old or older		
• $x \geq 10 \text{ yrs} \leq 19 \text{ yrs}$.	2,434	2.9%
• $x > 19 \text{ yrs} \leq 29 \text{ yrs}$.	14,515	17.4%
• $x > 29 \text{ yrs} \leq 39 \text{ yrs}$.	18,639	22.4%
• $x > 39 \text{ yrs} \leq 49 \text{ yrs}$.	17,715	21.2%
• $x > 49 \text{ yrs} \leq 59 \text{ yrs}$.	17,239	20.7%
• $x > 59 \text{ yrs}$.	12,853	15.4%
Number of farmers by their farming occupation status	83,395	
The highest proportion of farmers, at 59.4%, is that of unpaid family worker/subsistence farmer followed by 39.5% as self-employed farmer. The rest of the occupation categories account for less than half percentage point each.		
• Employer	222	0.3%
• Self-Employed	32,949	39.5%

Main Data Items	2020FAC	% share
• Paid Family Worker	296	0.4%
• Unpaid Family Worker	49,866	59.8%
• Volunteer	62	0.1%
Number of farmers who have savings bank account	42,751	
Overall, 51.3% (42,751) of farmers have saving bank account, though the proportion of male farmers having saving bank account, at 53.2%, is significantly higher compared to female farmers, with only 40.0% having savings bank account. Out of the total 42,751 farmers who have savings account, 88.8% are male and 11.2% are female.		
• Male	37,965	88.8%
• Female	4,786	11.2%
Number of farmers who own mobile phones	52,769	
Overall, 63.3% (52,769) of farmers have mobile phones, though the proportion of male farmers having mobile phones, at 64.8%, is significantly higher compared to female farmers, at 54.5%. Out of the total 52,769 farmers who have mobile phones, 87.6% are male and 12.4% are female.		
• Male	46,244	87.6%
• Female	6,525	12.4%
AGRICULTURAL HOUSEHOLD PARTICULARS		
AGRICULTURAL HOUSEHOLD		
Number of Agricultural Households by House Type	70,991	
Overall, 96.3% of total agricultural households had independent dwelling units and a small proportion, 3.3%, were housed in buildings having two or more households. Only a minuscule proportion, 0.4%, of agricultural households were housed in structures other than the two mentioned.		
• Independent Dwelling	68,380	96.3%
• Building housing two or more households	2,345	3.3%
• Other House Type	266	0.4%
Number of agricultural households by building outer wall type	70,991	
The highest proportion households, at of 37.3% had permanent walls of tin or corrugated iron, followed by wooden walls at 34.1%, concrete brick or cement at 22.2%, and all remaining categories accounted for less than 1% each.		
• Concrete, brick or cement wall	19,302	27.2%
• Wooden wall	24,202	34.1%
• Permanent wall of tin or corrugated iron	26,493	37.3%
• Wall of traditional bure (straw and wood) materials	545	0.8%
• Wall of makeshift or improvised materials	389	0.5%
• Other wall type	60	0.1%
Number of agricultural households by main source of water supply	70,991	
The highest proportion of households, at 39.4%, had metered water supply, followed by piped water without a meter at 28.6%, from a communal standpipe at 11.0%, borehole at 8.6%, roof tank at 6.1%, and well at 1.8%.		
• Metered	27,949	39.4%
• Piped without meter	20,280	28.6%
• Communal standpipe	7,777	11.0%
• Roof tank	4,318	6.1%
• Borehole	6,074	8.6%
• Well	1,302	1.8%
• River or Creek	1,458	2.1%
• Other water source	1,833	2.6%
Number of agricultural households by main source of light	70,991	

Main Data Items	2020FAC	% share
Electricity as the source of light in the agricultural households accounts for the highest proportion at 70.6%, followed by solar power at 25.2%, and kerosene at 2.2%. Only 1.9% of households used sources other than those mentioned for light.		
• Electricity	50,122	70.6%
• Kerosene Lamp	1,553	2.2%
• Benzene Lamp	86	0.1%
• Solar Power Unit	17,862	25.2%
• Other Source of Lighting	1,368	1.9%
FARM LAND		
Total area of farm land (ha)	194,768.6	
More than half of the entire land, 54.1% of the total agricultural land (194,768.6 ha), is operated under traditional ownership (Mataqali, Tokatoka, Yavusa, Kovukovu), followed by 23.7% under native lease, 13.9% under freehold, 6.0% under lease from the State, and 2.1% under informal arrangement. Only a minuscule proportion, 0.2%, of area is operated without any legal arrangement or other such arrangement.		
• Freehold land	27,005.2	13.9%
• Lease from State	11,618.0	6.0%
• Native lease	46,198.2	23.7%
• Traditional ownership (Mataqali, Tokatoka, Yavusa, Kovukovu)	105,388.3	54.1%
• Occupy land with informal arrangement	4,128.8	2.1%
• Occupy without any legal arrangement	347.8	0.2%
• Other	82.3	0.04%
Total number of farm land parcels	76,774	
Total number of farming households with farmland by farm size	68,424	
The highest proportion, 65.0% households, have agricultural land that is less than 1 ha, followed by 21.0% with land area from more than 1 to 3 ha, 6.2% from more than 3 to 5 ha, 4.4% from more than 5 to 10 ha, 2.0% between more than 10 to 20 ha, and 0.9% between more than 20 to 50 ha. The remaining two sizes of farms, more than 50 to 100 ha, and 100 ha or more, account for less than 0.5% of households each. Thus, the households with up to 5 ha of agricultural land account for more than 92.2% of total agricultural households in the country.		
• < 1 ha	44,475	65.0%
• 1 – 3 ha	14,383	21.0%
• 3 - 5 ha	4,255	6.2%
• 5 - 10 ha	3,000	4.4%
• 10 - 20 ha	1,355	2.0%
• 20 - 50 ha	598	0.9%
• 50 - 100 ha	145	0.2%
• 100 ha or more	213	0.3%
Total area of farm land by land-use type (ha)	194,768.6	
During the agriculture census reference year, 22.8% of operated area was occupied by temporary crops, 6.4% was fallow for one year or more, 14.3% was under permanent crops with no pastures, 17.5% under permanent crops with pastures, 10.3% under temporary meadows and pastures, 14.0% under permanent meadows and pastures, and 14.8% under uses other than those described.		
• Temporary crops	44,327.7	22.8%
• Fallow for one year or more	12,430.2	6.4%
• Permanent crops (no pastures)	27,814.4	14.3%

Main Data Items	2020FAC	% share
• Permanent crops with pastures	34,037.1	17.5%
• Temporary meadows and pastures (supply pastures)	20,053.8	10.3%
• Permanent meadows and pastures	27,312.8	14.0%
• Others	28,792.6	14.8%
Areas of farm land by years of use for agriculture (ha)	194,768.6	
The highest proportion of 64.1% of operated farming area is under use of the current farmer for more than ten years while the lowest proportion of 3.9% is being operated for 6-8 years. The operated area under the use of the current farmer for a period of up to 2 years accounts for 7.6%, 2 to 4 years for 7.6%, 4 to 6 years for 7.8% and 8 to 10 years for 8.9%.		
• Up to 4 Years	29,626	15.2%
• More than 4 Years and up to 8 Years	22,825	11.7%
• More than 8 Years	142,316	73.1%
CROPS		
Total volume of production (metric tonnes)	399,056.7	
During the 2020FAC reference period (12 months preceding 10 February 2020), the total volume of crop production in the country was recorded at 399,056.7 metric tonnes. The production of temporary crops represents 76.7% (306,035.2 metric tonnes) of the total crop production, while the remaining 23.3% (93,021.6 metric tonnes) is accounted for by permanent crops.		
• Central Division	145,774.9	36.5%
• Eastern Division	36,720.1	9.2%
• Northern Division	105,815.3	26.5%
• Western Division	110,746.4	27.8%
Total gross value of production (FJD'000)	2,558,747.6	
During the 2020FAC reference period (12 months preceding 10 February 2020), the total value of crop produced in the country was recorded at \$2.5 billion. The value of temporary crops represents 93.6% (\$2.3 billion) of the total value, while the remaining 6.4% (\$163.6 million) is accounted for by permanent crops.		
• Central Division	458,120.5	17.90%
• Eastern Division	132,747.4	5.19%
• Northern Division	1,672,100.8	65.35%
• Western Division	295,778.9	11.56%
LIVESTOCK		
Out of the total 22,991 livestock farming households in the country, 20.9% come from Central Division, 6.7% from Eastern Division, 44.0% from Western Division and 28.4% from Northern Division. During the Census reference period, 26.7% of livestock farming households in Fiji had dairy cattle, 28.3% had beef cattle, 11.0% had sheep, 35.6% had goat, 37.0% had pigs, 38.5% had poultry and 4.5% involved in apiculture. It may be noted that some total of proportions of different category of livestock farming households does not equal to hundred as some of the farmers may be farming more than one type of livestock. (See Table 5.1, 5.2 and Figure 5.1 and 5.1.2 for distribution of livestock farming household by Division & Province).		
Number of Households Involved in raising Livestock	22,991	
• Beef Cattle	6,498	
• Dairy Cattle	6,144	
• Pig	8,515	
• Goat	9,212	
• Sheep	4,341	
• Poultry	8,862	
• Apiculture	1,294	
Number of Stock/Sheds/Hives		
• Beef Cattle	70,041	
• Dairy Cattle	49,650	

Main Data Items	2020FAC	% share
• Pig	58,420	
• Goat	143,853	
• Sheep	37,435	
• Poultry	1,449,857	
• Apiculture	13,162	
FORESTRY		
HOUSEHOLDS		
During the reference period of the 2020FAC, a total of 70,991 agricultural households were reported in the country, out of which 69,476 households, constituting 97.9%, were involved in forestry activities. It may be noted that these households may also be involved in other agricultural activities (crop, livestock and/or fishing), therefore, the number of households involved in four agriculture activities will not add up to 70,991. Of the households involved in forestry activities, 88.5% were headed by males, with 11.5% of households headed by females.		
Number of household participating in forest activities	69,476	
• Male head of household	61,456	88.5%
• Female head of household	8,020	11.5%
HOUSEHOLD MEMBERS		
During the 2020FAC reference period, 7.9% of household members were engaged in planting trees (e.g. sandalwood, mahogany, etc.), 33.8% in planting voivoi, 4.7% in planting masi, 0.4% in tree nursery work, and 98.1% in gathering firewood/cutting tree branches, 31.8% in harvesting wild food (e.g. ota, etc.), 3.8% in harvesting of masi, 31.6% in harvesting of voivoi, 91.2% in harvesting wild plants for herbal medicine, 18.3% in engaged in producing handicrafts, 6.1% in selling handicraft and, wild foods etc., and 0.2% in forest activities other than those described. The sum total of percentages for different activities exceeds one hundred as household members often work on more than one activity.		
Number of household members participating in different types of forest activities	183,129	
• Male	95,592	52.2%
• Female	87,537	47.8%
Number of Household members participated in Different Types of Forest Activities	183,129	
• Planting trees (eg. sandalwood, mahogany, etc)	3,214	
o Male	2,573	80.1%
o Female	641	19.9%
• Planting voivoi	21,955	
o Male	10,875	49.5%
o Female	11,080	50.5%
• Planting masi	1,146	
o Male	550	48.0%
o Female	596	52.0%
• Tree nursery work	123	
o Male	82	66.7%
o Female	41	33.3%
• Gathering firewood	182,320	
o Male	95,257	52.2%
o Female	87,063	47.8%
• Harvesting wild food (e.g. ota, etc.)	7,748	
o Male	4,133	53.3%
o Female	3,615	46.7%
• Harvesting of masi	767	
o Male	360	46.9%

o Female	407	53.1%

Main Data Items	2020FAC	% share		
o Male	1,893	14.3%		
o Female	11,368	85.7%		
• Harvesting wild plants for herbal medicine		173,418		
o Male	86,915	50.1%		
o Female	86,503	49.9%		
• Handicraft		7,921		
o Male	445	5.6%		
o Female	7,476	94.4%		
• Selling handicrafts, wild foods, etc.		1,246		
o Male	262	21.0%		
o Female	984	79.0%		
PRIMARY OR SECONDARY OCCUPATION				
Out of a total 183,129 household members who reported their involvement or participation in forestry activities, only 14,094 members, constituting a small fraction of 7.7%, considered their participation in forestry activities as either their primary or secondary occupation. Even among such persons, a large majority, 82.0%, had forestry as secondary occupation and only 18% reported forestry as their primary occupation. Further, among members who reported forestry as either their primary or secondary occupation, 48.8% were male and 51.2% were female. This is mainly because of women's greater involvement in activities such as planting and harvesting voivoi, planting and harvesting masi, and producing and selling handicrafts.				
Number of household members who considered forestry activities as their primary or secondary occupation	14,094			
• Male	6,880	48.8%		
• Female	7,214	51.2%		
Number of household members who considered their involvement in forestry activities as primary or secondary occupation by age group	14,094			
• x≥10yrs≤19yrs.	672	4.8%		
• x>19yrs≤29yrs.	2,859	20.3%		
• x>29yrs≤39yrs.	3,157	22.4%		
• x>39yrs≤49yrs.	2,763	19.6%		
• x>49yrs≤59yrs.	2,709	19.2%		
• x>59yrs.	1,934	13.7%		
Number of household members who considered forestry activities as their primary or secondary occupation and have a savings account	4,263			
• Male	2,662	62.4%		
• Female	1,601	37.6%		
Number of household members who considered forestry activities as their primary or secondary occupation and own mobile phones	5,469			
• Male	3,516	64.3%		
• Female	1,953	35.7%		
Number of households by agriculture activities and tasks will not add up to total number of households engaged in at least one agriculture activity or tasks as it is a multiple-choice question.				
FISHING				
HOUSEHOLDS				
During the reference period of the 2020FAC, a total of 70,991 agricultural households were reported in the country, out of which 29,450 households, constituting 41.5%, were involved in fishing activities. It may be noted that these households may have also been involved in other agriculture activities (crop, livestock, and forestry). Therefore, sum total of the number of households involved in different agricultural activities will not add up to 70,991. The proportion of households involved in fishing activities that were headed by males was 89.9%, and 10.1% was headed by females.				

Number of households engaged in fishing	29,450	100.0%
Main Data Items	2020FAC	% share
• Male head of household	26,480	89.9%
• Female Head of Household	2,970	10.1%
Number of households engaged in fishing by type of fishing and aquaculture activities	29,450	
• Inshore fishing		18,906
o Male head of household	17,054	90.2%
o Female head of household	1,852	9.8%
• Offshore fishing		8,536
o Male head of household	7,983	93.5%
o Female head of household	553	6.5%
• Freshwater fishing		13,139
o Male head of household	11,703	89.1%
o Female head of household	1,436	10.9%
• Making fish products at home for sale		5,031
o Male head of household	4,694	93.3%
o Female head of household	337	6.7%
• Selling fish and other fish products		660
o Male head of household	626	94.8%
o Female head of household	34	5.2%
HOUSEHOLD MEMBERS		
Out of 69,836 household members participating or involved in fishing activities, 53.8% were male and 46.2% were female. The 2020FAC reveals that during the reference period, 57.9% of such members were engaged in inshore fishing, 23.9% in offshore fishing, 26.1% in freshwater fishing, 8.8% in making fish products at home for sale, and 1.1% in selling fish and other fish products. It may be noted here that the sum total of percentages for different activities exceeds hundred as persons often work on more than one activity.		
Number of household members participated in at least one fishing activity		69,836
• Male household members	37,602	53.8%
• Female household members	32,234	46.2%
Number of household members participated in fishing by type of activity		
• Inshore fishing		40,423
o Male household members	19,708	48.8%
o Female household members	20,715	51.2%
• Offshore fishing		16,666
o Male household members	10,001	60.0%
o Female household members	6,665	40.0%
• Freshwater fishing		18,234
o Male household members	1,171	6.4%
o Female Household Members	17,063	93.6%
• Making fish products at home for sale		6,132
o Male household members	48	0.8%
o Female household members	6,084	99.2%
• Selling fish and other fish products		779
o Male household members	613	78.7%
o Female household members	166	21.3%
PRIMARY OR SECONDARY OCCUPATION		

Out of a total of 69,836 household members who reported their involvement and participation in fishing activities during the census reference period, only 4,513 members, constituting a small fraction of 6.5%, had fishing as either their primary or secondary occupation. Among such members, 49.6% had fishing as primary occupation and 50.5% reported fishing as their secondary occupation. Further, among members who reported fishing occupation, 66.6% were male and 33.4% were female.

Main Data Items	2020FAC	% share
Number of household members who considered fishing as their primary or secondary occupation	4,513	
• Male	3,007	66.6%
• Female	1,506	33.4%
Number of household members who considered fishing as their primary or secondary occupation by age group	4,513	
• x≥10yrs≤19yrs.	121	2.7%
• x>19yrs≤29yrs.	797	17.7%
• x>29yrs≤39yrs.	1,133	25.1%
• x>39yrs≤49yrs.	1,078	23.9%
• x>49yrs≤59yrs.	862	19.1%
• x>59yrs.	522	11.6%
Number of household members who considered fishing as their primary or secondary occupation and have a savings account	1,638	
• Male	1,299	79.3%
• Female	339	20.7%
Number of household members who considered fishing as their primary or secondary occupation and owned mobile phones	2,335	
• Male	1,841	78.8%
• Female	494	21.2%
CLIMATE CHANGE		
AGRICULTURAL HOUSEHOLD		
During the reference period of 2020FAC, 75.2% (53,376) of agricultural households in Fiji reported having an awareness of climate change, whereas 20.6% (14,599) reported as being somewhat aware. Only 4.2% (3,016) households were found not having awareness about climate change.		
Understood climate change	53,376	
• Male head of household	47,734	89.4%
• Female head of household	5,642	10.6%
Don't understand climate change	3,016	
• Male head of household	2,546	84.4%
• Female head of household	470	15.6%
Some understanding about climate change	14,599	
• Male head of household	12,584	86.2%
• Female head of household	2,015	13.8%
AGRICULTURAL EQUIPMENTS (Crop, Livestock, Fisheries, Forestry)		
AGRICULTURAL HOUSEHOLD		
During Agriculture Census reference period in Fiji, 14.2% (10,045) of agricultural households used machinery. This constitutes 73.4% small machinery users and 26.6% heavy machinery users.		
Number of agriculture households that used agricultural machinery in the last 12 months	10,045	
• Small machinery	7,369	73.4%
• Heavy machinery	2,673	26.6%
AGRICULTURAL SERVICES (Crop, Livestock, Fisheries, Forestry)		

AGRICULTURE HOUSEHOLDS		
During the 2020FAC reference period, 96.4% (68,416) agricultural households had access to agriculture extension services. This constitutes 88.7% male-headed households and 11.3% female-headed households.		
Number of agriculture households that accessed agriculture extension services		68,416
Main Data Items	2020FAC	% share
• Male head of household	60,652	88.7%
• Female head of household	7,764	11.3%
FOOD INSECURITY		
AGRICULTURE HOUSEHOLDS		
Number of agriculture households by accessibility to balanced meals three times a day		
During the 2020FAC reference period, 41.0% of agricultural households always had access to balanced meals three times a day, 53.5% had access to three balance meals a day only sometimes, and 3.6% never had access to a balanced meal. It may be noted that sum total of percentages for different responses does not equal to hundred, as some of the households refused to respond to this question.		
• Always		29,131
• Sometimes		38,007
• Never		2,530
Number of agriculture households by how often (often, sometimes or never) they ran out of food due to lack of money or other resources		
During the 2020FAC reference period, 4.0% agricultural households often ran out of food due to lack of money or other resources, 32.2% ran out of food sometimes due to lack of money, and 62.0% never ran out of food due to lack of money or other resources.		
• Often		2,817
• Sometimes		22,824
• Never		44,026

SECTION 1: METHODOLOGY

1.0 2020 FIJI AGRICULTURE CENSUS

“A Census of Agriculture is a statistical operation for collecting, processing and disseminating data on the structure of agriculture, covering the whole or a significant part of a country.”

The agriculture census is one of the key pillars of any national statistical system, and in many developing countries, it is often the only means of producing statistical information on the structure or growth of the agriculture sector captured at the smallest unit of data collection, which is the household level.

Most Fijians depend on agriculture (crop and livestock), fishing and forestry for their livelihoods. As a small island state, Fiji is vulnerable to climate change, natural disasters and economic shocks. Therefore, it is imperative to have the necessary data sets that clearly identifies these occurrences and allows for a responsive development strategies based on evidence.

The Fijian Government's 5-Year and 20-Year National Development Plans (NDPs) committed to carrying out a national agriculture census in 2020. This timeline corresponded well with the World Programme for the Census of Agriculture 2020 (WCA 2020). The NDP is committed to supporting the achievement of the following goals:

- Develop a national food and nutrition security policy or framework; and
- Continue broad-based support to agriculture as a key driver of economic growth and poverty alleviation.

WCA 2020 provides the basis for supporting agricultural censuses by the Food and Agriculture Organization (FAO) in United Nations member countries between 2016 and 2025. Fiji, through the Ministry of Agriculture (MoA), along with other Pacific Island countries (Guam, Niue, Samoa and Vanuatu), adopted the World Census of Agriculture 2020 Guidelines for conducting a national census of agriculture in 2020.

The 2020FAC slogan “Your Voice, Your Future, Be Counted” was instigated to help farmers recognize that participating in this important national exercise is their responsibility and a decision for a better future in agriculture.

2.0 AUTHORITY FOR THE AGRICULTURE CENSUS

The Government of Fiji, through a Cabinet decision on 17 May 2019, approved the Implementation of the 2020 Fiji Agriculture Census by the MoA.

3.0 OBJECTIVES

The aim of the agricultural census is to provide basic structural data on agriculture such as farm sizes, cropping patterns, and use of machinery and inputs, etc. Specifically, the objectives of 2020FAC were;

- To provide baseline data on the structure of Fiji's agriculture sector.
- To improve and update Fiji's Agriculture and Rural Statistics System capacity to generate quality agricultural data.
- To provide evidence for planning and policy decision making in the agriculture sector and national development.
- To provide an updated listing frame for future agriculture censuses and surveys.
- To provide basic data to help monitor progress of the agriculture sector towards national, regional and global development targets, in particular the Sustainable Development Goals (SDGs).

4.0 SCOPE

The 2020FAC aims to measure the structure of Fiji's agriculture sector. The scope covers all four agricultural sub-sectors: crop, livestock, fisheries, forestry; and incorporates all related activities. This was not possible with previous censuses due to their limited scope, which only captured information on crop and livestock, with coverage on other sub-sectors only recorded if the interviewed farming households also practiced these activities.

In the present agriculture census, data has been collected at household and institutional (holding) levels. Institutional data has been collected from institutions like schools, group-owned farming organizations and large commercial farms that are not owned by households.

5.0 COVERAGE

For the purpose of the 2020FAC, 81,943 households were visited, whereby 71,631 were successfully interviewed. The attempts to interview the remaining 10,312 households were not successful due to the following reasons:

- Refusal to interview after three attempts
- Entire household absent for six months or more
- No household member at home despite three visits

Out of the 71,631 households interviewed, 99.1% (70,991) were involved in agricultural activities. These households came from 197 districts and 4,178 localities in rural and part of the peri-urban areas of Fiji. The selection of areas in the peri-urban sector was based on the result of the 2017 Population and Housing Census. The selected areas were identified, verified on the ground and demarcated by the MoA GIS team before they were recognized as the 2020FAC boundary.

The previous four agriculture censuses (1968, 1978, 1991, and 2009) were conducted on a sample basis, and covered only rural and maritime areas due to limitations on budget and other resources. This restricted coverage resulted in truncating the scope of farming households and farmers in Fiji and, therefore, provided an incomplete frame for agriculture production surveys that were subsequently conducted by MoA.

However, the 2020FAC is the first ever agriculture census conducted on a complete enumeration basis encompassing all the four sub-sectors of agriculture and covering the entire rural and part of the peri-urban areas in Fiji where agriculture is commonly practiced. This census will, therefore, generate a complete frame for future agriculture surveys that will be conducted by MoA and other interested agencies.

Table I: Coverage of 2020 FAC by Sectors/Division

Division	Sector	Number of Localities	Total Household Visited	Total Household Interviewed	Total Agriculture Household Interviewed
Central	Rural	976	18,009	15,946	15,819
	Part of Peri-urban	119	2,420	2,232	2,210
	Total	1,095	20,429	18,178	18,029
Eastern	Rural	379	6,598	5,831	5,776
	Part of Peri-urban	11	198	195	193
	Total	390	6,796	6,026	5,969
Northern	Rural	1,478	20,708	17,974	17,864
	Part of Peri-urban	63	2,571	2,397	2,358
	Total	1,541	23,279	20,371	20,222
Western	Rural	1,039	25,913	22,295	22,059
	Part of Peri-urban	113	5,526	4,761	4,712
	Total	1,152	31,439	27,056	26,771
TOTAL		4,178	81,943	71,631	70,991

6.0 QUESTIONNAIRE

The Ministry of Agriculture through the Fiji Agriculture & Rural Statistics Unit formulated and designed two Questionnaires that was used for data collection in the 2020FAC for Household and Non-Household (Institutions) with technical assistance and guidance from FAO Consultants, Technical Working Group and Technical staff of the three sub-sectors; crop & livestock, fisheries and forestry.

The 2020 FAC questionnaire was designed after the scope, coverage and approach was determined;

- **Type of Holding:** Both the Household and Non-Household (Institution) Holdings were targeted
- **Method of Data Collection:** Electronic questionnaire was designed on World Bank Survey Solution Questionnaire Designer software as tool for conducting face to face interview.

Data Items were determined from the followings;

- **Output of Questionnaire Framework** – “Themes Essential and Frame items” that was circulated to core agricultural agencies; Ministry of Agriculture, Ministry of Forestry and Ministry of Fisheries (see Figure 1 below)

Figure 1: Planning Matrix for identifying Essential and Frame Items for 2020FAC

Planning content for 2019 Agriculture Census							
Organisation:		Please complete for all your priority items. Return to Sainiana Kirisitiana <sainiana.kirisitiana@govnet.gov.fj> by 15 October 2015

Theme 01: Identification and general characteristics							
E F	0101	Identification and location of agricultural holding	Y				
	0102	Respondent for the holding	N				
E	0103	Legal status of agricultural holder (type of holder)	Y				
E	0104	Sex of agricultural holder	Y				
E	0105	Age of agricultural holder	Y -group				
	0106	National/ethnic group of household head or agricultural holder	Y				
E F	0107	Main purpose of production of the holding	N				
E F	0108	Other economic activities of the household	Y				
	0109	Proportion of income from holding's agricultural production in household's total income	Y				
	0110	Main agricultural activity of the holding	Y				
	0111-0113	Details of hired manager (presence, age, sex)	Manager not identified				
	Other	add rows as needed					
Theme 02: Land							
E F	0201	Total area of holding	Y				
E	0202	Area of holding according to land use types	Y				
E	0203	Area of holding according to land tenure types	Y				
	0204-0206	Parcel details - location, area, Land use, Land tenure, rent	Y				
	0207	Rent	N				
	0209, 0210	Use of shifting cultivation, Years since cleared	N				
	Other	add rows as needed					

E Essential Item

F Frame item for future in depth survey

Outputs or Data Needs identified from internal and external stakeholders consultations

- o 2nd June 2019 @ 10am to 4.00pm: MoA, Crop Extension Division
- o 3rd June 2019 @ 10am to 4.00pm : MoA, Animal Health & Production Division
- o 4th June 2019 @ 10am to 1.00pm : Ministry of Fisheries
- o 4th June 2019 @ 2pm to 4.30pm : Ministry of Health (National Food & Nutrition Centre)
- o 5th June 2019 @ 9am to 10.00am : Ministry of Rural & Maritime Development
- o 5th June 2019 @ 11am to 1.00pm : Ministry of Women, Children and Poverty Alleviation
- o 5th June 2019 @ 2pm to 4.00pm : Ministry of iTaukei Affairs

Primary Reference Documents: World Programme for the Census of Agriculture 2020, 2009 National Agriculture Census Questionnaire

The identified data items were mapped and analysed based on other alternative sources, priorities and frame for future in depth survey. As a result, thirteen (13) sections were introduced which contained 413 questions.

The Questionnaire was designed on World Bank Survey Solution Questionnaire Designer software proposed by UNFAO as part of the CAPI system. The Questionnaire designer used a structural design that allows easy flow and capture of information supported by the use of rosters (even rosters within rosters), sections and subsections. Administrator had to assign users for the Enumerators, Area Coordinators (Supervisors) and Headquarters staff.

A draft questionnaire was presented at the TWG Meeting and Data User Conference on 29th November 2019 at Tanoa International Hotel, Suva followed by consultation with Professors from Fiji National University and University of the South Pacific who were invited to scrutinize the 2020FAC Draft Questionnaire. The questionnaire was finalized after incorporating inputs received from all these consultations.

7.0 PILOT CENSUS

A Pilot Census was carried out in selected localities throughout Fiji to test the questionnaires, data collection methods, the training programme for field staff, instruction manuals, data editing and coding procedures, data processing and tabulation.

The first questionnaire pre-test was conducted in-house from 20–26 June 2019, before the first field pre-test, which was undertaken on 10 July 2019. The main purpose was to test the flow and structure of questions in the questionnaire. Two teams of enumerators and observers from four ministries (Ministry of Agriculture, Ministry of Fisheries, Ministry of Forestry and Ministry of Women) were deployed in Deuba District, Serua, for field pre-test.

The second pre-test was conducted in the Sigatoka area along the sugarcane belt-areas in Ba. The duration of interview per questionnaire and enumerators depth of understanding on 2020FAC questionnaire was also tested.

Refer to 2020FAC: Volume 4: Administration Report for further details on the questionnaire and training manuals.

The results of the Pilot Census were utilized to make further improvements in the census instruments including the data processing system. A complete set of tables was produced using data from the pilot to evaluate the quality of data and tabulation software.

8.0 FIELD OPERATION MANUAL

The manuals are very helpful in establishing the procedures to be followed and the work expected to be carried out during such large-scale data collection exercises. The majority of the staff could carry out the census work and resolve the challenges in their own way, but it is essential that they all proceeded in the same manner at all levels (high-level staff, supervisors, enumerators). For this, they must follow the same concept, definitions and procedures. With a comprehensive instruction manual, it is much easier to achieve this objective and maintain data comparability.

There were two manuals prepared for the 2020FAC:

- Field Operation Manual for Enumerators and Field Supervisors
- Data Verification Manual for Area Coordinators (Supervisors)

Both the manuals clearly lay down concepts, definitions, procedures and instructions that are relevant to the nature of field operation and office data verification using the survey solution supervisors' account. Due to time and resource constraints, the activities for both the questionnaire and manual development were undertaken simultaneously under the guidance of FAO Consultants.

Thorough consultations with Technical Operational Divisions, Crop Extension, Animal Health and Production, Ministry of Fisheries and Ministry of Forestry, along with the clear process documented in the 2017 Population & Housing Supervisors Manual, contributed to the successful drafting of 2020FAC Field Operation Manual and Area Coordinators Manual. Apart from the Consultation, the 2009 NAC Field Operation Manual was also used as a reference document.

The draft manual was used at the Area Coordinators, Field Supervisors and Enumerators Training. Thereafter, it was updated incorporating the feedback and printed in a handy A5-size document convenient for Enumerators and Field Supervisors, and was made available a week before the field work for census commenced on 10 February 2020.

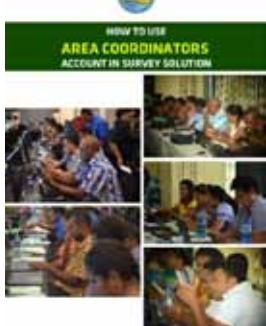

The content of the two manuals are as follows;

1. Field Operation Manual

- Part 1: Overview of 2020FAC (Introduction, Coverage, Scope, Reference Period, Concepts and Definitions)
- Part 2: Roles and Responsibility – Enumerator and Field Supervisor (Responsibility and Terms and Conditions of Service)
- Part 3: Field Operation Structure and CAPI System Structure
- Part 4: Survey Operations (Interview Techniques, Hours of Work, Enumeration Area, Method & Techniques of Covering EA and Map Reading, Approach of Addressing Empty Dwellings and Refusals, Method of Last Coverage Checks and Labelling, and Data Quality Control)
- Part 5: 2020FAC Questionnaire Components

2. Area Coordinators Manual

- Part 1: Terms of Reference and Roles
- Part 2: Instructions of how to use features exist in the CAPI Supervisors account

Full detail of the 2 Manuals can be accessed through Volume 4 Annex of the 2020 FAC Report.

9.0 CENSUS REFERENCE PERIOD

Reference Period	Enumeration Period
<ul style="list-style-type: none">• Reference period for Census: past 12 months from the date of commencement of census (10th Feb 2020).• For better recall and accurate reporting, shorter reference period were also included for different sections and simple calculations were recommended to capture the last 12 months data e.g. for fishing activities, questions were referenced at weekly basis, milk production for 3 months• The census reference day is a point in time used for livestock numbers and other inventory items.• Climate Change Impact – 10 years	<ul style="list-style-type: none">• February 10th to 29th, 2020 as per the Cabinet approval on 17th May 2019

10.0 ENUMERATION PERIOD

The field work of 2020 Fiji Agriculture Census was undertaken during 10 to 29 February 2020, covering 70,991 agricultural households in the rural sector and selected peri-urban boundary areas where agricultural activities are commonly practiced. This was the first time that all four sub-sectors of agriculture: crop, livestock, fisheries and forestry were covered on a complete enumeration basis.

11.0 USE OF COMPUTER ASSISTED PERSONAL INTERVIEWING (CAPI)

The Ministry of Agriculture adopted the Computer Assisted Personal Interviewing (CAPI) system through Survey Solution software on tablets for data collection during the 2020FAC. Each census enumerator was provided with a tablet for use in the census data collection, replacing the paper questionnaires used in past censuses. CAPI was used for both the household and institutional questionnaires.

As mentioned earlier, the census questionnaires were designed to accommodate the CAPI methodology. Questionnaires were loaded into the tablets and the census enumerators then asked the questions as displayed on the screen and entered responses directly into the tablets. Once an interview was completed, the questionnaire was submitted electronically to the respective area coordinator.

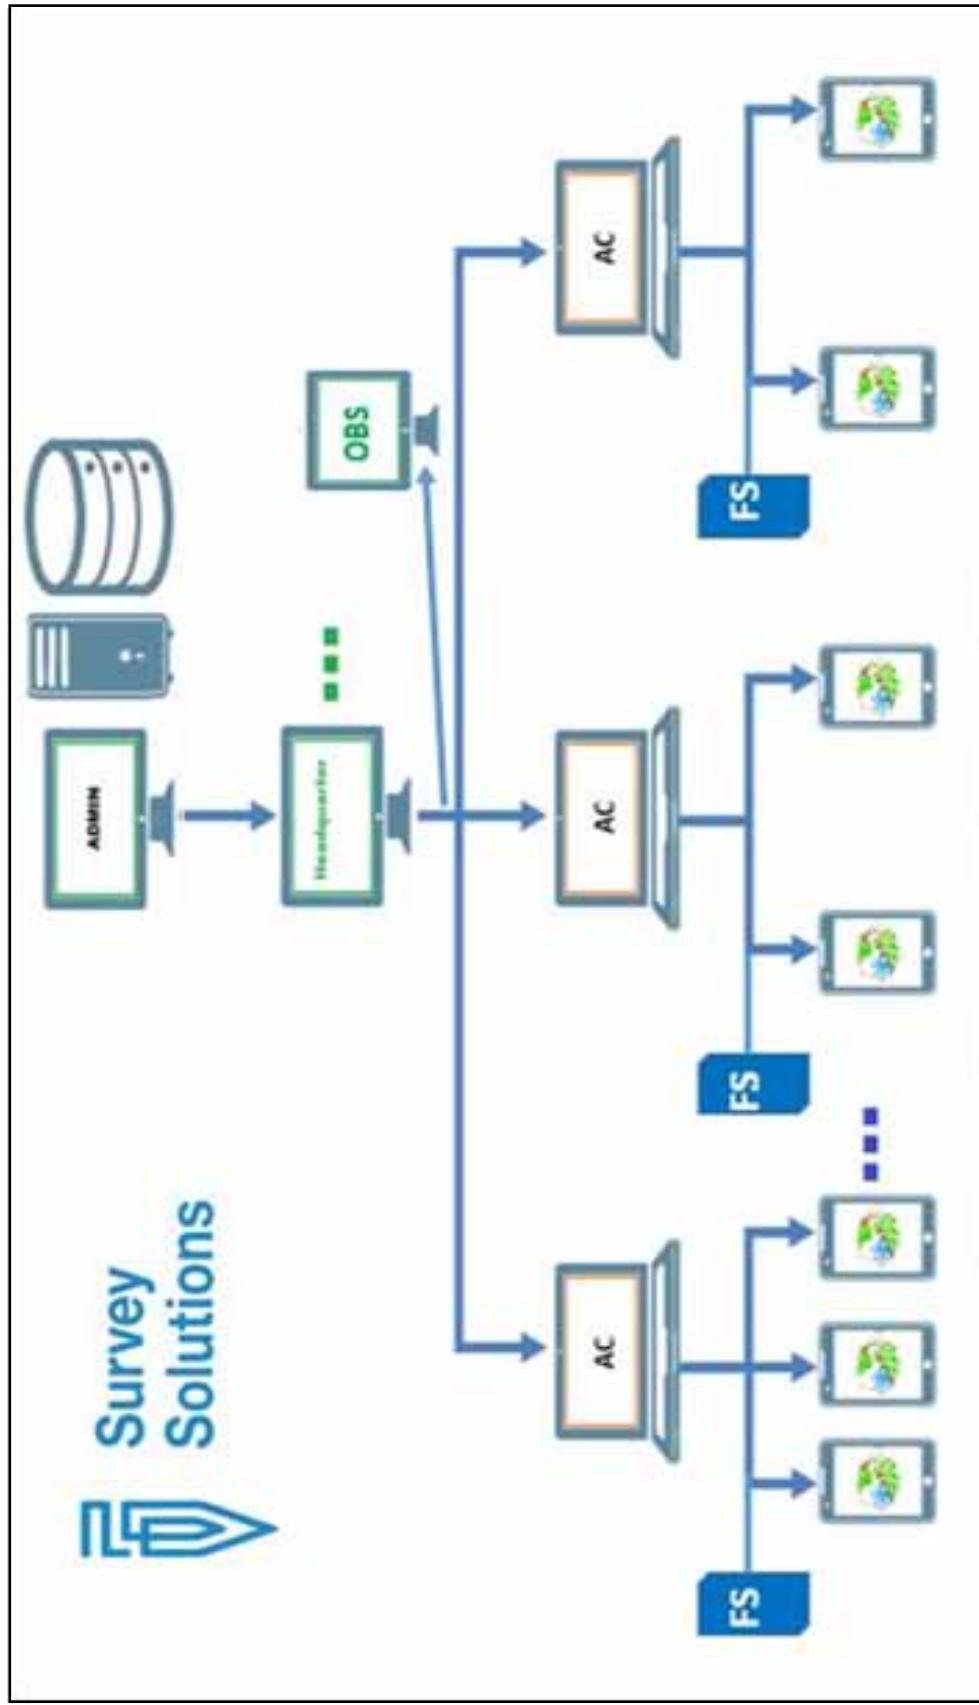

Within the CAPI system, the questionnaires were structured to provide a coherent sequence of questions and to lead enumerators efficiently through the questionnaire. Each question to be asked was displayed on the screen, and questions that were not relevant based on the answers to previous questions were automatically skipped.

A comprehensive array of data validation checks was incorporated into the CAPI data collection system to help enumerators identify possible errors/outliers in the data reported. This was done as the responses were recorded so that enumerators could correct the data on the spot. This greatly improved data quality compared with previous censuses.

There were two types of validation checks. The first was a check for data that were incorrect, such as the area under different land-use categories for a parcel not adding to the area of the parcel. Here, an error message was displayed on the screen, and the enumerator was required to correct the data. The second was a check on data that might be wrong or were unusual in some way, such as a household having 1,000 cattle. Here, a warning message was displayed on the screen, and the enumerator had to verify with the respondent that the data were correct. Apart from the two validation checks, there were field supervisors assigned to all enumerators to provide agriculture technical advice. The field supervisors were required to provide last checks on all cases before they were synced daily.

The adoption of this new technology substantially improved the quality and transparency of data collected, shortened duration of data processing and led to timely dissemination of results for Census data users. Across the world, some countries are leading this global trend and Fiji is part of this revolutionary move.

12.0 DATA PROCESSING

13.0 DATA DISSEMINATION

The products, services, and dissemination methods and tools for the 2020FAC results and findings were determined through TWG Committee meetings, consultations with stakeholders and the Data User Conference. A Preliminary Report was prepared and submitted to the Permanent Secretary of Agriculture on 14 August 2020.

The final results of the 2020FAC are anticipated to be tabulated, analysed, printed and published in four volumes: (1) Descriptive Analysis Report (2) Detail Analysis and Report of 2020FAC Enumeration Area (3) Gender Analysis Report and (4) Administrative Report. All volumes will be printed and available from the MoA website. A platform will be set up for the Agriculture Statistics Online Output System, whereby results will be presented through an online dashboard system including Arc-GIS (Maps), videos and info-graphics. This report, Volume 1, covers the general tables derived from the 2020FAC data after statistical processing.

14.0 DATA ARCHIVING

An anonymized (de-identified) version of the database in SPSS format has been produced, in which all respondent details such as names, household number and GPS co-ordinates have been removed. These identifying variables are stored in a separate database that can be re-identified by running an SPSS syntax. The 2020 FAC micro-data, final tables and final reports will be secured in the MoA main server located in the MoA IT room with limited access by the Stats IT Officers.

SECTION 2: 2020FAC RESULTS AND FINDINGS

CHAPTER 1: DEMOGRAPHIC

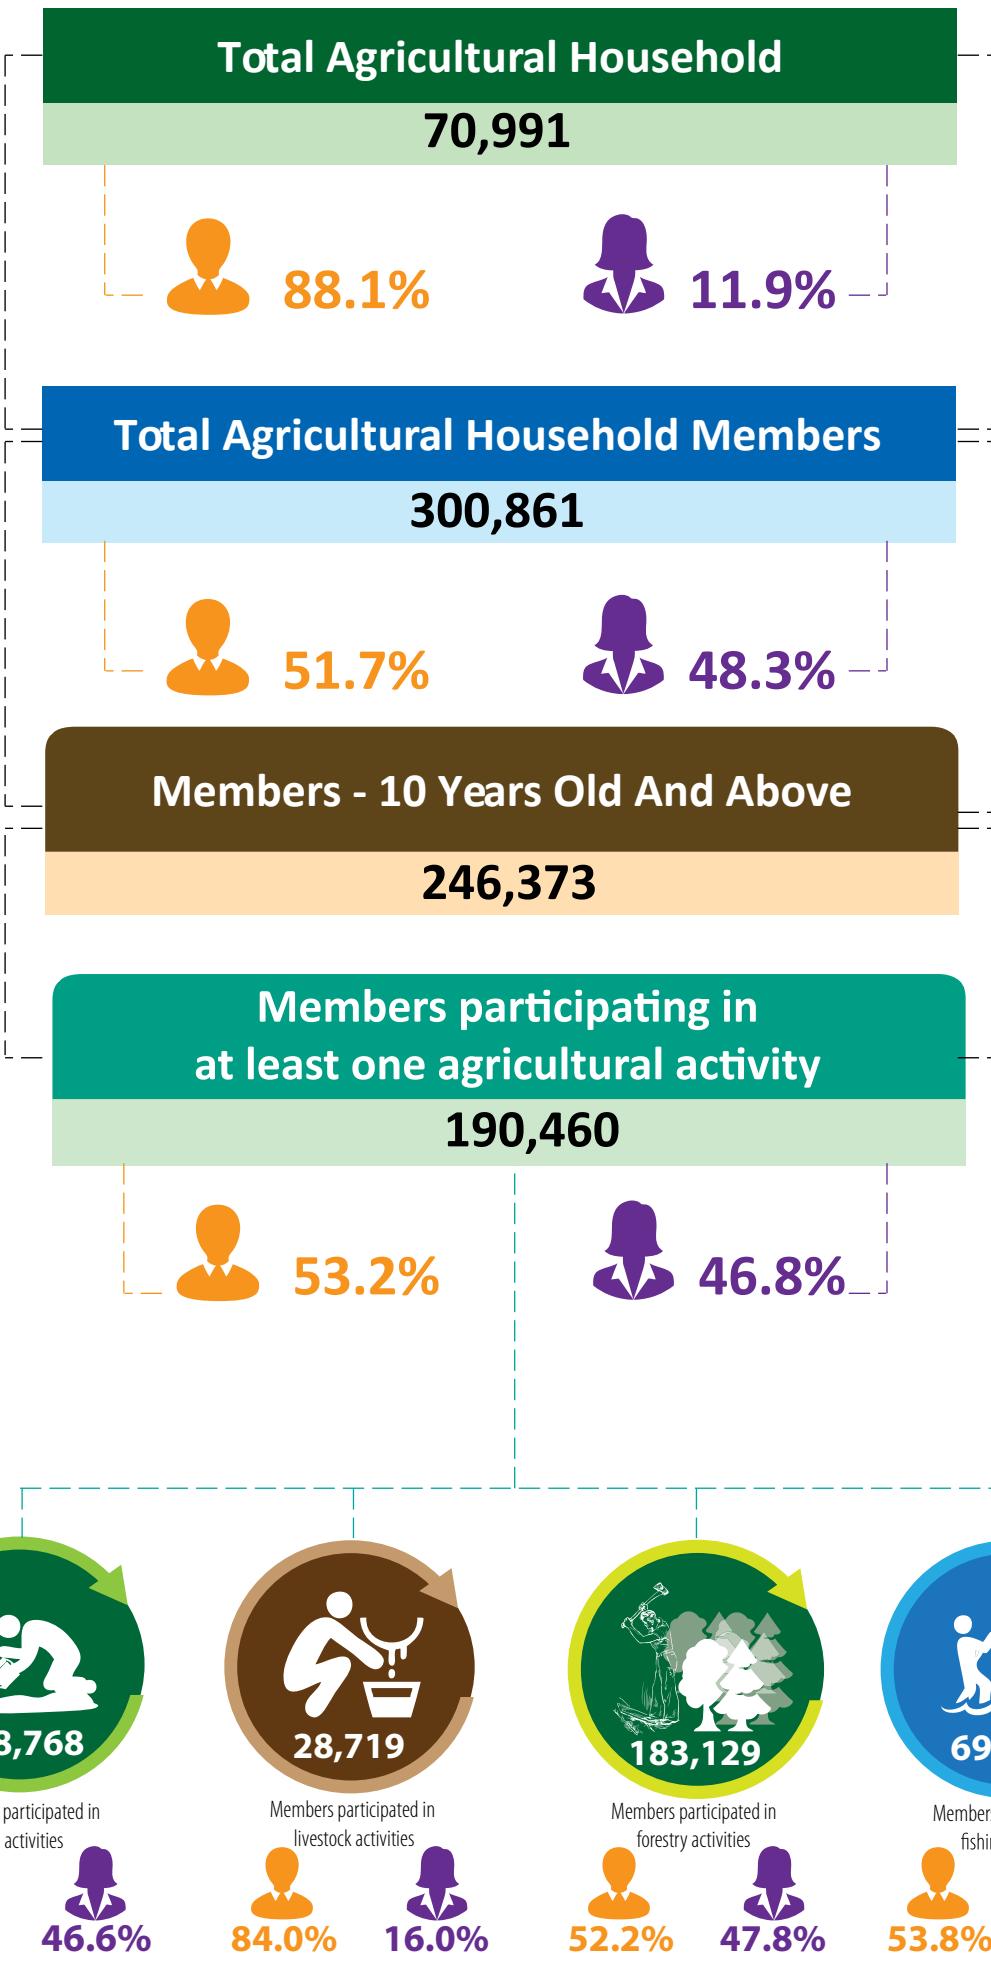

A. List of Tables

No.	Table Number	Table Name	Page Number
AGRICULTURE HOUSEHOLD			
1	i	Distribution of Agriculture Household, Members and Average Household Size by Division	34
2	1.1	Number of Agricultural Households by Size of Household	35
3	1.2	Number of Agricultural Households Members by Sex/Age Group/Division/Province	37
4	1.3	Number of Agricultural Household Members by Educational Attainment and Currently Studying/Sex/Division/Province	40
5	1.4	Number and Percentage of Agricultural Household Members attended Agriculture Training by Province/Sex/Division/Province (only asked to members with 10 yrs. and above)	43
6	1.5	Number of Agricultural Household Members by Sex/Marital Status/Division/Province (only asked to members with 18 yrs old and above)	44
7	1.6(a)	Distribution of Agriculture Household Members Participation on Agriculture Activities by Sex/Division	47
8	1.6(b):	Number of Agricultural Household Members by Division/Province/Agricultural Activities/Sex	48

16	1.17.1	% Distribution of Farmers With and Without Savings Account by Sex	90
17	1.19.1	Distribution of Farmers With and Without Mobile Phones by Sex	104

C. Tables and Graphs

This chapter contain sets of tables that reflects 2020 FAC Demographic results in two parts;

i) Agriculture Households

A Household is a small group of persons who share the same living accommodation, contribute their income and wealth to acquire certain goods and services and share the same eating arrangement. The same defines an “Agricultural Household” where the main economic activity identified is farming or the practice of any agricultural activity: crop, livestock, fisheries and forestry.

ii) Farmers Particulars

A Farmer is a member of an Agricultural Household who identifies farming crop or raising livestock as his or her primary or secondary occupation in the last 12 months since the 2020FAC period (10–29 February 2020). However, the set of tables presented does not identify those agriculture household members who are temporarily involved or assisted in crop farming or raising livestock in the last 12 months. The tables only present those agriculture household members who identify farming crop and raising livestock as their permanent occupation or main economic activity.

i. AGRICULTURAL HOUSEHOLD

The 2020FAC recorded a total of 70,991 agricultural households with a total population of 300,861 from rural and part of peri-urban areas of Fiji.

Table I highlights the distribution of agricultural household members by Division according to coverage that was carried out during the census period.

Table I: Distribution of Agricultural Household, Members and Average Household Size by Division

Division	Agricultural Household	Sex of Ag Household Members				Total Agricultural Household Members		Average Agricultural Household Size	
		Male		Female		Count	%		
		Count	%	Count	%				
Central	18,029	40,031	51.3	37,984	48.7	78,015	100.0	4.3	
Eastern	5,969	12,349	53.7	10,651	46.3	23,000	100.0	3.8	
Western	26,771	58,277	51.1	55,840	48.9	114,117	100.0	4.3	
Northern	20,222	44,877	52.3	40,852	47.7	85,729	100.0	4.2	
Fiji	70,991	155,534	51.7	145,327	48.3	300,861	100.0	4.2	

The seven tables below records demographics particulars of agricultural household members. The following Tables 1.4, 1.5, 1.6 and 1.7 highlights findings of a sub-set of agricultural household members who are 10 years old and above (Tables 1.4, 1.6 and 1.7) or 18 years old and above (Table 1.5), therefore, the total count for these tables will not tally with the total enumerated agricultural household members (300,861) as highlighted in Tables 1.1, 1.2 and 1.3.

Figure A: Distribution of Agricultural Household by Division, 2020

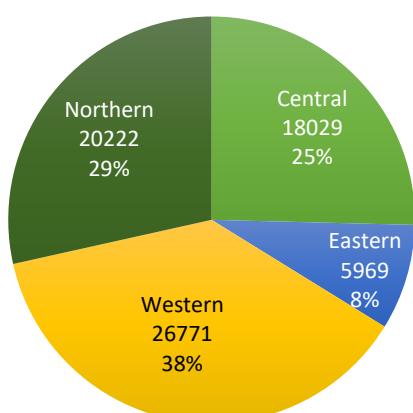

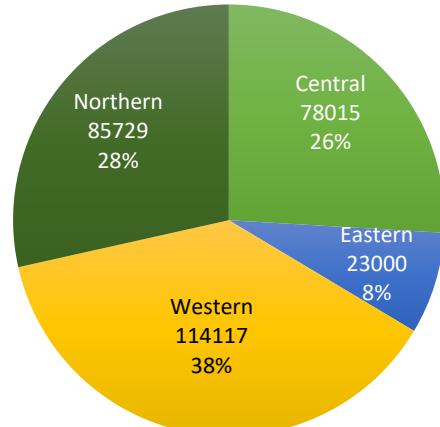

Figure B: Distribution of Agricultural Household Population by Division, 2020

1.1 Size of Agricultural Household

It can be seen from table 1.1 that out of a total of 70,991 Agricultural Households in the country, 25.4% (18,029) households are located in Central Division, 8.41% (5,969) households in Eastern Division, 37.7% (26,771) households in Western Division and 28.5% (20,222) households are located in Northern Division.

The single person households account for 6.1% (4,319) of agricultural households whereas 2.0% (1,443) households have 10 persons or more. The average size of households stand at more than 4 members all province except for Kadavu, Lau, and Lomaiviti in the Eastern Division where the average size of household is slightly fewer than 4 members per household.

Table 1.1: Number of Agricultural Households by Size of Household/Division/Province

Division	Province	1 Member		2-3 Members		4-5 Members		6-9 Members		10 or more Members		Number of Agricultural Households		Average HH Size

1.2 Sex and Age Distribution of Agricultural Household Population

Out of a total 300,861 members of agricultural households, 51.7% (155,534) are males and 48.3% (145,327) are females. A total of 54,488 (18.1%) members are aged younger than 10 years and 34,030 (11.3%) members are of age 60 years or older. The median age for males is within the age group of 29 - 39 years ($x > 29 \text{ yrs} \leq 39 \text{ yrs}$) and the medium age for females is within the age group of 19 - 29 years ($x > 19 \text{ yrs} \leq 29 \text{ yrs}$).

For additional information and detail on gender, refer to 2020FAC Vol 3 - Gender Report.

1.3 Educational Attainment of Agricultural Household Members

With a total of 300,861 agricultural household members, the highest proportion 33.5% (100,708), consists of members who have completed Year 9 – 10. Another sizeable proportion, 35.4% (106,438), of members are currently studying and only a small proportion about 6% of agricultural household members have 8 years or less of schooling.

Table 1.3 records distribution of agricultural household members by Highest Educational Attainment and those who are currently studying by sex at National, Division and Province level.

1.4 Agricultural Population who attended Agricultural Training

A total of 13,111 members of agricultural household that were enumerated during the census period had attended any agricultural related training within the census reference period (10 February, 2019 – 10 Feb, 2020). The Northern Division had the highest proportion at 36.7%, Western Division at 29.4%, Central Division at 24.8% and Eastern Division at 9.0%. Among those who underwent training, 75.3% (9,875) were males and only 24.7% (3,236) were females.

Figure 1.4.1: Distribution of Agricultural Household Members who attended Agricultural Training by Province

1.5 Marital Status of Agricultural Household Members

The marital status was enquired of only those members who were aged 18 years or more. As on the date of enquiry, out of a total of 201,564 such members, 21.1% (42,506) were never married, 68.4% (137,956) were currently married, 7.7% (15,452) were widowed and 2.1% (4,160) were separated or divorced. Only a small proportion of less than 1% were living in defacto relationship.

1.6 Agricultural Household Members Participation by Agricultural Activities

The total Agricultural Household members interviewed (agricultural and non-agricultural) with 10 years old and above was recorded at 247,250 during the agriculture census period. Out of this, 77.0% (190,460) participated in at least one agricultural activity in any of the four sub-sectors; crop, livestock, fisheries and forestry in the last 12 months from Agriculture census period.

It may be noted that since a person can be involved in more than one activity during last one year from the date of the agricultural census, he may be counted more than once. Therefore, the sum of persons involved in different activities may not add up to the total number of persons engaged in agricultural activities. Figure 1.6.1 shows less gap in terms of male and female participation on crop activities, forestry activities and fishing activities. This does not only reflect household members who considered involvement in agriculture activity as primary and secondary occupation, but it also represents those members who temporarily participated or assisted in any agricultural activities when it was needed in the last 12 months.

Figure 1.6.1: Percentage of Male and Female Participation by Agricultural Activities

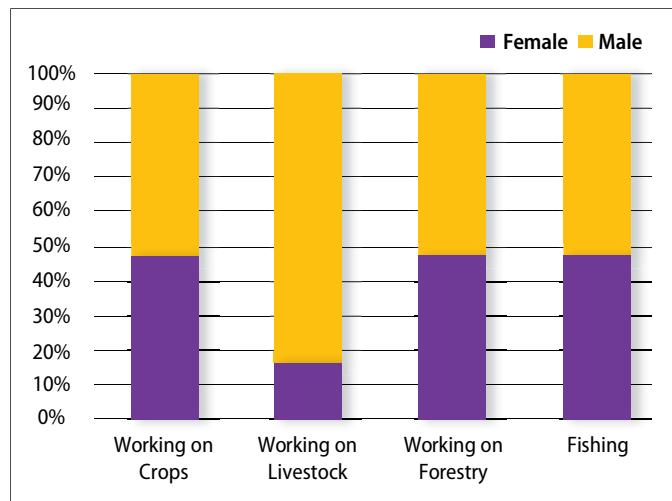

Table 1.6 (a) below highlights that out of 188,768 members who participated in crop activities from 70,801 households, 53.4% (100,734) were males whereas 46.6% (88,034) were females; out of 28,719 members who participated in livestock activities from 23,011 households, 84.0% (24,118) were males whereas 16.0% (4,601) were females; out of 183,129 members who participated in Forestry activities from 69,476 households, 52.2% (95,592) were males whereas 47.8% (87,537) were females and out of 69,711 members who participated in Fishing activities from 29,554 households, 53.8% (37,505) were males whereas 46.2% (32,206) were females. Detail gender analysis can be seen in Volume 3 of the 2020FAC Report "Gender Analysis Report".

1.7 Agricultural Household Members Participation on Agricultural Tasks

Table 1.7 gives agricultural activity-wise participation of household members over last twelve months from the date of agriculture census. The 190,460 Agricultural Household members who confirmed participation on at least one agricultural activities had also revealed the different type of agriculture tasks (crop, livestock, forest, and fishing) they involved in for the last 12 months from the agriculture census period.

A household member, having been involved in more than one agricultural activity, may have been counted more than once. Therefore, the sum total of members engaged in different agricultural activities may not tally with the total number of members aged 10 years or older. The Bar Charts shows the proportion of male and female participation on each agricultural tasks.

Figure: 1.7.1

Detail gender analysis can be seen in Volume 3 of the 2020FAC Report “Gender Analysis Report”.

ii) Farmers Particulars

Tables highlighted in Part ii of this chapter represent farmers particulars of agricultural household members who are 10 years old and above. It recorded 83,395 agricultural household members who identify farming crops and raising livestock as their main economic activity and recognized themselves as a farmer of which 85.6% (71,424) of them are males and 14.4% (11,971) are females. (See Table ii for further distribution detail)

Northern Division had the highest with 32.3% farmers, Western Division with 30.8%, Central and Eastern Division with 27.7% and 9.2% respectively. Out of the total 11,971 female farmers, Central Division had the highest proportion with 17.9%, Northern Division with 15.8%, Western Division with 11.8% and Eastern Division with 7.3%.

Table ii: Percentage Distribution of Farmers/ Division/Sex

Division	Sex				Total			
	Male		Female					
	Number	%	Number	%				
Central	18,939	82.1	4,123	17.9	23,062	100.0

1.8 Primary and Secondary Occupation as a Farmer (Crop & Livestock)

Table 1.8 (a) presents distribution of farmers by their Primary / Secondary occupation. It may be seen from the table, that out of a total of 53,926 farmers who have reported farming as their primary occupation, only about 7% (3,766) of them are females. However, among members reporting farming as their secondary occupation, female participation is fairly better at about 27.8% (8,205).

1.9 Farmers Age and Sex Distribution

Out of a total of 83,395 farmers, 85.65% (71,424) are males and only 14.35% (11,971) are females. The pyramid graph shows the modal age of the farmers comes out to be $x > 29 \text{ yrs} \leq 39 \text{ yrs}$ (30 – 39 years) having 22.35% of the total farmers, though a little over 15% (12,853) of the farmers are of age $x > 59 \text{ yrs}$ (60 years or more). There are 43% (35,388) of farmers at the age of $x \geq 10 \text{ yrs} \leq 39 \text{ yrs}$ (10 to 39 years) while 57% (47,807) at the age of 40 and above. This signifies the aging farmer's population in the crop and livestock industry.

1.10 Farmers Highest Educational Attainment and Currently Studying by Sex

Figure 1.10.1 gives the distribution of highest educational attainment of farmers. It can be seen that the highest proportion i.e. 54% (45,114) of farmers have completed Year 9 – 10. It is worth noticing that among these 45,114 farmers, 85.48% (38,565) are males and only 14.52% (6,549) are females. A good proportion of 6.89% of farmers have completed Tertiary education and only less than 1% are currently studying. Figure 1.10.1 shows the percentage distribution of male and female farmers by highest educational attainment and also for those that are currently studying.

Figure 1.10.1 Percentage distribution of farmers by highest education attained/currently studying in Fiji

1.11 Farmers by Sex and Marital Status

Table 1.11 gives distribution of farmers by sex and marital status in the country. As can be seen in the table, during the Census year, 19.5% of farmers were reported as never married, 72.4% as currently married, 5.1% as widowed and 2.3% as separated or divorced. Only less than 1% of farmers were found to be in defacto relationship. The highest proportion of separation / divorce at 2.6% was observed among farmers in Western Provinces.

Table 1.12: Farmers by Sex and Occupation Status Division/Province

Table 1.12 gives distribution of farmers by sex and occupation status. The table reveals that highest proportion of farmers at 59.4% is that of unpaid family workers/subsistence followed by 39.5% as self-employed. Rest of the occupation categories account for less than half percentage point each.

1.13 Farmers Participation by Agricultural Activities

Table 1.13, 1.14 and 1.15 present participation of farmers in different agricultural activities like crop production, livestock etc. Since a particular farmer is usually involved in more than one agricultural activity, he/ she might have been counted under such categories that is more than once. It may be noted therefore that the sum total of farmers participating in different activities might not tally with the total number of farmers.

1.16 Farmers by Type of Functioning Challenges

Table 1.16 gives distribution of farmers by type of functioning challenges, sex and age-group. It may be noted from the table that 95.1% of males and 94.9% of females had none of the functioning challenges. The maximum proportion of 1.2% were reported with difficulty in hearing (even with hearing aids) followed by 1.1% with visual impairment (problem seeing even with glasses).

Table 1.16: Number of Farmers by Type Functioning Challenges/Sex/Age/Division

1.17 Farmers with Savings Account

Table 1.17 and Figure 1.17.1 gives distribution of farmers having savings bank account by age-group and sex. It may be observed from the table that overall 51.3% of farmers have savings account, though the proportion of males having savings account at 53.2% is significantly higher compared to females at 40.0%. And this trend is consistently observed in Central, Western and Northern regions with 53.4%, 58.1%, 55.6% for Males and 33.5%, 39.5%, 47.8% for females respectively with only exception being in Eastern region where proportion of females having savings bank account is marginally higher at 30.6% as compared to males at 29.1%.

1.18 Farmers without Savings Account by Reasons

Table 1.18 gives information on number of farmers who did not have any savings bank account either with any bank or financial institution as on the date of enumeration. It may be observed that 33,459 males not having any savings account, accounted for 46.9% of male farmers whereas 7,185 such females account for 60.0% of female farmers. The further analysis on reasons for not having savings account reveals that for 62.8% farmers, it is not a priority whereas 25.3% did not have enough to save. The no accessibility in their areas was the reason for not having a savings account for sizeable proportion of 11.1% and only a minuscule proportion of less than 1% had other reasons. It is revealing that for both the categories viz. not a priority and not enough to save, the proportion of females not having savings account was higher at 65.8%, 26.6% compared to males at 62.1%, 25.1% respectively. Thus, the female farmers are found lagging behind their male counterparts as regards financial inclusion.

1.19 Farmers with Mobile Phones

Figure 1.19.1 and Table 1.19 presents very important information on farmers' access to mobile phones. It is found that out of a total of 83,395, 63.3% (52,769) of farmers had mobile phone. In this regard though, the male farmers were better placed at 64.8% as compared to female farmers at 54.5%. Regarding to the access to mobile for different age-group farmers, highest proportion of 72.68% was observed for the age-group $x > 49 \text{ yrs} \leq 59 \text{ yrs}$ (50-59 years) followed by 70.19% for $x > 39 \text{ yrs} \leq 49 \text{ yrs}$ (40-49 years), 68.91% for $x > 59 \text{ yrs}$ (60 years and above), 63.31% for $x > 29 \text{ yrs} \leq 39 \text{ yrs}$ (30-39 years), 45.40% for $x > 19 \text{ yrs} \leq 29 \text{ yrs}$ (20-29 years) and 22.93% for farmers aged $x \geq 10 \text{ yrs} \leq 19 \text{ yrs}$ (10-19 years). In Central, Eastern, Western, Northern regions, 60.09%, 55.02%, 68.25%, 63.62% farmers respectively had mobile phones.

CHAPTER 2:

AGRICULTURE HOUSEHOLD PARTICULARS

Chapter 2: Agricultural Household Particulars

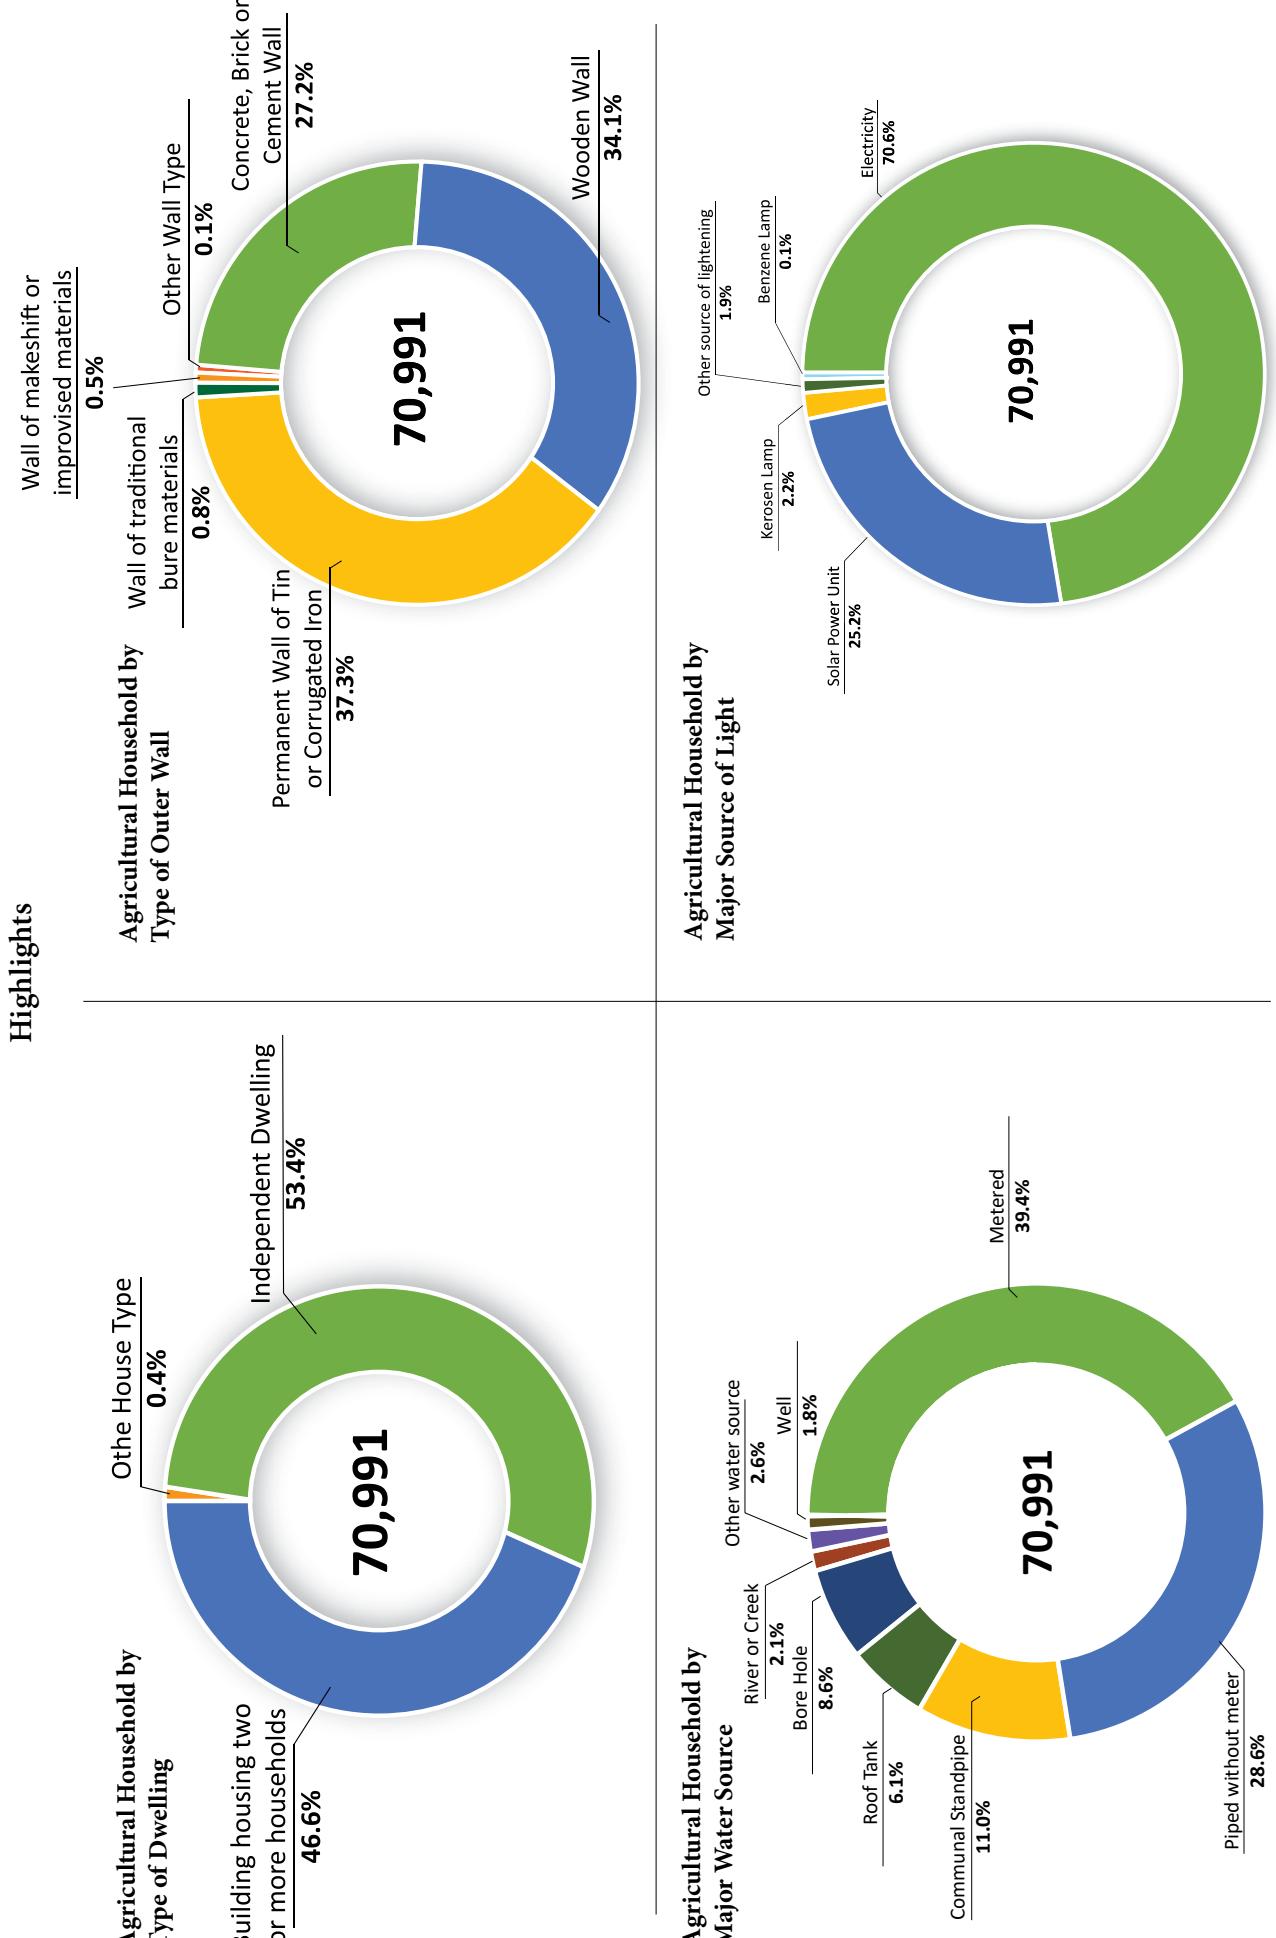

A. List of Tables

No.	Table Number	Table Name	Page Number
1.	2.1	Number of Agricultural Households by Type of Dwelling/Division/Province	111
2.	2.2	Number of Agricultural Households by Type of Outer Wall /Sex of Household Head/Division/Province	112
3.	2.3	Number of Agricultural Households by Main Source of Water Supply/ Sex of Household Head/Division/Province	115
4	2.4	Number of Agricultural Households by Source of Light/Sex of Household Head/Division/Province	118

B. List of Figures

No.	Figure Number	Name	Page Number
1	2.1.1	% Distribution of the Type of Dwelling by Division	111
2	2.2.1	% Distribution of the Type of Outer Walls by Division	112
3	2.3.1	% Distribution of Main Source of Water Supply by Sex of Agriculture Household Head	114
4	2.4.1	Distribution of Ag Household by Main Source of Light	118

C. Tables and Graphs

2.1 Type of Dwelling

Table 2.1 presents distribution of agricultural households by type of dwelling units. It may be seen from the table that 96.3% of total agricultural households had independent dwelling units and a small proportion of 3.3% were housed in buildings having two or more households. Only a minuscule proportion of 0.4% agricultural households were housed in structures other than the two described. Among regions, highest proportion of 98.4% agricultural households had independent dwelling units in Eastern province followed closely by Central at 97.8%, North at 97.2% and West at 94.2%. The region with highest proportion of agricultural households housed in buildings housing two or more households was found to be Western region at 5.4% percent followed by North at 2.2%, Central at 2.1% and Eastern at 1.4%.

2.2 Type of Outer Walls

Table 2.2 describes the agricultural households by their type of outer wall and sex of the household head. It is interesting to note that out of a total of 70,991 agricultural households, 8,445 i.e. 11.90% households were headed by females.

As regards their type of outer wall, the highest proportion of 37.32% were accounted for by households with permanent walls of tin or corrugated iron, followed by wooden walls at 34.09% concrete brick or cement at 22.19% while all the remaining categories accounted for less than 1 percent each.

The highest proportion of houses built with concrete brick or cement were found in Western division at 43.36 % followed by East at 35.18%, Central at 20.79 and North at 9.12%.

2.3 Main Source of Water Supply

Table 2.3 and Figure 2.3.1 presents data on agricultural households by their main source of water supply. It reveals that the highest proportion of households at 39.4% had metered water supply followed by piped without meter at 28.6%, from communal standpipe at 11.0%, Borehole at 8.6%, Roof tank at 6.1%, and Well at 1.8%. The proportion of households having metered water supply stood highest in Central region at 47.9% followed closely by West at 46.9%, North at 29.5% and East at 13.3%. Figure 2.3.1 shows high percentage of Metered Water Source for Female Head of Household than Male Households.

Main Source of Light

Table 2.4 and Figure 2.4.1 presents data on important sources of light in agricultural households in Fiji. It may be seen that the Electricity as the source of light in the agricultural households accounts for the highest proportion at 70.6% followed by solar power at 25.2% and Kerosene at 2.2%. Only 2.05 percent household's use sources other than those mentioned for light.

Electricity has been found to be most important source of light across geographical divisions. In Central division, the households using electricity as source of light stood highest at 87.3% followed by West at 79.5%, North at 50.6% and East at 44.9%.

C. Tables and Graphs

3.1 Number of Household with Farm Land by Land Size

Table 3.1 and Figure 3.1.1 provides distribution of agricultural households by the size of agricultural land operated by them. The table reveals that in Fiji, highest proportion of 65% households have agricultural land less than 1 Ha, followed by 21% between 1 to 3 Ha, 6% between 3 to 5 Ha, 4% between 5 to 10 Ha, 2% between 10 to 20 Ha and 1% between 20 to 50 Ha.

The remaining two size categories namely 50 to 100 Ha and 100 Ha or more account for less than half a percent households each. Thus, the households with up to 5 Ha of agricultural land account for more than 92% of total agricultural households in the country. Among regions, households with up to 5 Ha of agricultural land account for about 96% of total agricultural households in the Central region, over 99% in Eastern region, about 93% in Western region and more than 86% in Northern region. Except in Northern region where 1.8% households fall in 20 – 50 Ha category, the proportion of households with agricultural land between 20 – 50 Ha, 50 – 100 Ha, 100 Ha or more is negligible in all other regions.

3.2 Number of Household with Farm Land by Number of Farm Parcel

Table 3.2 and Figure 3.2.1 provides distribution of agricultural households by number of parcels they operate. The table reveals that in Fiji, 90.6% households operate one parcel, 9.2% households operate 2 to 4 parcels and only a minuscule proportion of 0.2% households operate more than 4 parcels. A similar pattern is observed in regions too. Highest proportion of just one parcel households account for 93.0% in Central region followed by 90.7% in Western region, 88.9% in Northern region and 88.8% in Eastern region. The distribution of households operating 2 to 4 parcels is slightly different. The highest proportion of households operating 2 to 4 parcels stands at 11.1% in Eastern region followed by 10.8% in Northern region, 9.2% in Western region and 6.9% in Central region.

3.3 Farm Land Area

Table 3.3 and Figure 3.3.1 gives distribution of land by the type of tenure of its operation. It may be seen from the table and graph that more than half of the entire land operated, that is, 54.1% of the total agricultural land is operated under Traditional ownership (Mataqali, Tokatoka, Yavusa, Kovukovu) followed by 23.7% under Native lease, 13.9% under Free hold, 6.0% under Lease from State and 2.1% under informal arrangement. Only a minuscule proportion of 0.2% of area is operated under informal arrangement (without legal arrangement) or other such arrangement.

Figure 3.3.1: % Distribution of Farm Area by Land Tenureship

Among regions, highest proportion of land under Traditional ownership at 91.5% lies in Eastern Division followed by 64.1% in Central Division, 51.4% in Western Division and 48.2% in Northern Division. Native lease accounts for 27.5% of operated area in Western Division followed by 26.5% in Northern Division, 15.8% in Central Division and just 1.9% in Eastern Division. Highest proportion of Freehold land at 19.9% lies in Northern Division followed by 11.1% in Central Division, 8.2% in Western Division and 3.5% in Eastern Division.

The share of land leased from State exhibits a slightly different pattern. The highest proportion of land leased from state at 10.3% is reported from Western Division followed by 7.7% from Central Division, 2.8% from Northern Division and a negligible proportion of 0.02% in Eastern Division.

Table 3.3: Number of Household with Farm Land/Type of Land Tenure/Land Area (Ha)/Division/Province

3.4 Number of Years Farm Land was used

Table 3.4 and Figure 3.4.1 gives the distribution of operated area by number of years of use by the current farmer on the date of enumeration. Table 3.4 reveals that highest proportion of 73.1% of operated area is under use of the current farmer for more than eight years while the lowest proportion of 11.7% is being operated for 4-8 years. The operated area under the use of the current farmer for a period of up to 4 years accounts for 15.2%.

More or less, a similar pattern is exhibited in all the regions too. In Central Division, the highest proportion of 72.8% of operated area is under the use of the current farmer for a period of more than 8 years followed by 17.9% up to 4 years, 9.3% for more than 4 years to 8 years.

Figure 3.4.1: % Distribution of Farm Lands by Number of Years Used

In the Eastern Division, the operated area under use of the current farmer for a period of up to 4 years accounts for 17.2%, more than 4 years to 8 years for 8.5% and more than 8 years for 74.3%. In Western Division, the operated area under use of the current farmer for a period of up to 4 years accounts for 9.2%, more than 4 years to 8 years for 11.3% and more than 8 years for 79.5%. In the Northern Division, the highest proportion of 68.7% of operated area is under the use of current farmer for a period of more than 8 years followed by 18.0% for up to 4 years and more than 8 years for 13.3%.

3.5 Farm Area by Land Use Type

Table 3.5 and Figure 3.5.1 gives distribution of operated area by land use categories. The table and graph reveals that during the reference period of Agricultural Census 2020 in Fiji, 22.8% of operated area is occupied by the temporary crops, 6.4% was fallow for one year or more, 14.3% was under permanent crops with no pastures, 17.5% under permanent crops with pastures, 10.3% under temporary meadows and pastures, 14.0% under permanent meadows and pastures and 14.8% in under uses other than those described. The land use pattern in regions was found to be not very different.

In the Central Division, the proportion of land in respective categories was 31.4%, 4.9%, 7.4%, 14.9%, 13.0%, 15.5% and 12.8%. In Eastern Division, the land use categories in the same order accounted for 39.1%, 3.7%, 10.3%, 11.4%, 6.7%, 5.8% and 23.0% of the total operated area in the region. In the Western Division, highest proportion of 18.6% of operated area fell under the category Permanent crops with pastures followed by 18.4% under permanent crops with no pastures, 17.8% under permanent meadows and pastures, 14.9% under temporary crops, 11.1% under temporary meadows and pastures, 9.3% under fallow for one year or more besides 10.0% under other land use categories. In the Northern Division, 22.9% of operated area is occupied by the temporary crops, 5.3% was fallow for one year or more, 14.8% was under permanent crops with no pastures, 18.4% under permanent crops with pastures, 8.9% under temporary meadows and pastures, 11.6% under permanent meadows and pastures and 18.1% in under other uses.

C. Tables and Graphs

Summary of Crop Sub-sector

Table 4.1 provides total volume and value of production by type of crops in Fiji. It can be seen from the table that of the total value of crops harvested during the Census reference period (10 February, 2019 – 10 February, 2020), 93.6% is accounted for by the Temporary crops while the share of Permanent crops works out to only 6.4%.

The share of the value of temporary crops and permanent crops is not very different in divisions too. In the Central division, the share of value of temporary and permanent crops works out to 97.8% and 2.2%; Eastern division 88.8% and 11.2%; Western division 81.0% and 19.0%; Northern division 95.1% and 4.9% respectively.

Figure 4.1.1: % Distribution of Volume of Crop Production/Division/Province/Type of Crops

If we examine the contribution of various divisions in the crop production, it is noted that in terms of quantity of production of temporary crops, highest contribution at 45.8% comes from Central division followed by 25.7% from Western division, 19.9% from Northern division and 8.6% from Eastern division. Similarly, in terms of quantity of production of Permanent crops, highest contribution at 48.2% comes from Northern division followed by 34.6% from Western division, 11.3% from Eastern division and 5.9% from Central division.

In terms of value of temporary crops, highest contribution at 66.4% comes from Northern division followed by 18.7% from central, 10.0% from Western and 4.9% from Eastern division. Similarly, highest contribution in terms of value of permanent crops also comes from Northern division followed by 34.4% from Western division, 9.1% from Eastern division and 6.2% from Central division.

Table 4.1: Total Volume and Value of Crop Production by Division/Province Type of Crops (Feb 10 2019 - Feb 10 2020)

Division	Province	Volume of Production (Mt)						Value of Production (FJD'000)

B) TEMPORARY CROPS

(i) Geographical Division

This is a straightforward section tabulating and giving, among other things, area planted and area harvested for temporary crops in the country. It can be seen in Table 4.2 that in the area planted, Northern had the highest proportion of 41.7%, followed by Central Division with 26.0%, Western Division with 23.0% and Eastern Division with 9.2% and this geographical distribution also seen in the area harvested. Central Division dominated in volume harvested of temporary crops with 45.8%, followed by Western Division with 25.7%, Northern Division with 19.9% and Eastern Division at 8.5%. Because of the high value of return for Yaqona, Northern contributed 66.4% to total value of temporary crop production, followed by Central with 18.7%, Western at 10.0% and Eastern at 4.9%.

Table 4.2: Distribution of Areas, Volume of Value Harvested of Temporary Crops by Division in Fiji

Division	Area Planted		Area Harvested		Volume Harvested		Value of Harvested Temporary Crop	
	Area (Ha)	%	Area (Ha)	%	Volume(Mt)	%	Value (FJD'000)	%
Central	3,574	26.0%	9,871	33.8%	140,272	45.8%	447,996	18.7%
Eastern	1,260	9.2%	1,774	6.1%	26,164	8.5%	117,932	4.9%
Northern	5,727	41.7%	11,651	39.9%	61,018	19.9%	1,589,687	66.4%
Western	3,161	23.0%	5,937	20.3%	78,581	25.7%	239,520	10.0%
FIJI	13,722	100.0%	29,234	100.0%	306,035	100.0%	2,395,135	100.0%

Table 4.3 and 4.4 highlights the distribution of temporary crops in terms of area planted, area harvested, volume harvested and value of harvest across the four geographical divisions. Cassava found to have the highest proportion of volume harvested with 38.4%, followed by Dalo with 33.4%, Yaqona with 8.0%, okra with 3.8% and ginger with 3.3% and 4.2% respectively during the census reference period. Because of the high value of return for Yaqona, it has accounted for 83.1% of the total value of temporary crops harvested, followed by dalo with 6.0%, cassava with 4.9% , okra with 1.8% while the rest of the temporary crops had less than one percent. It can be seen that in the area planted, Yaqona had the highest proportion of 47.3%, followed by Cassava with 19.7%, Dalo with 15.6% Rice with 6.8% and others with one percent or less.

PRODUCTION OF TEMPORARY CROPS IN CENTRAL DIVISION BY PROVINCE

It can be seen that in the area planted for temporary crops in Central Division, Naitasiri province had the highest proportion of 49.9%, followed by Tailevu province with 25.5%, Namosi province with 12.0%, Rewa and Serua Province both had 6.78%. Naitasiri province dominated area harvested, volume and value of production with 65.8%, 72.5% and 74.9% in order.

Table 4.5: Distribution of Areas, Production and Value of Temporary Crops in Central Division by Province

Province	Area Planted		Area Harvested		Volume Harvested		Value of Harvested Temporary Crop	
	Area (Ha)	%	Area (Ha)	%	Volume(Mt)	%	Value (FJD'000)	%
Naitasiri	1,784.6	49.9%	6,492.7	65.8%	101,709.0	72.5%	335,736.9	74.94%
Namosi	427.4	12.0%	396.3	4.0%	4,460.7	3.2%	13,941.7	3.11%
Rewa	242.5	6.8%	1,322.2	13.4%	7,498.9	5.3%	41,908.0	9.35%
Serua	242.4	6.8%	295.9	3.0%	4,421.8	3.2%	16,890.5	3.77%
Tailevu	876.9	24.5%	1,364.0	13.8%	22,181.3	15.8%	39,518.5	8.82%
Total	3,573.7	100.0%	9,871.0	100.0%	140,271.7	100.0%	447,995.6	100.00%

Cassava had the highest proportion of volume harvested with 43.3%, followed by Dalo with 25.9%, Ginger with 10.2%, Pumpkin and Yaqona with 5.6% and 5.5% respectively, Sweet Potato (Kumala) with 2.3%, Cucumber with 1.3% and other crops with less than one percent during the census reference period. In terms of area planted for temporary crops during the census reference period, Dalo and Yaqona recorded the highest with 36.9% and 33.0% respectively, followed by cassava with 18.9%, Ginger with 3.1%, Sweet Potato with 1.2%, Watermelon with 1.1% and others had less than one percent.

Table 4.6: Temporary Crops by Province/Plants/Areas/Volume and Value of Production in Central Division

PRODUCTION OF TEMPORARY CROPS IN EASTERN DIVISION

It can be seen that in the area planted for temporary crops in Eastern Division, Kadavu province had the highest proportion of 43.6% followed by Lomaiviti province with 40.7%, Lau province with 11.8% and Rotuma with 3.9%. During the census reference period, volume of temporary crops harvested was dominated by Kadavu Province, Lomaiviti province and Lau had 31.7% and 29.0% respectively while Rotuma harvested 671.3 metric tonnes which constitutes 2.6% of the total volume of temporary crops harvested in Eastern Division. This distribution applies for area harvested and value of harvest as well.

Table 4.7: Distribution of Areas, Production and Value of Temporary Crops in Eastern Division by Province

Division	Area Planted		Area Harvested		Volume Harvested		Value of Harvested Temporary Crop	
	Area (Ha)	%	Area (Ha)	%	Volume(Mt)	%	Value (FJD'000)	%
Kadavu	549.3	43.6%	679.2	38.3%	9,611.1	36.7%	54,958.0	46.60%
Lau	148.9	11.8%	459.6	25.9%	7,589.2	29.0%	26,851.3	22.77%
Lomaiviti	513.2	40.7%	591.1	33.3%	8,292.6	31.7%	32,746.1	27.77%
Rotuma	48.7	3.9%	44.7	2.5%	671.3	2.6%	3,376.9	2.86%
Total	1,260.0	100.0%	1,774.5	100.0%	26,164.2	100.0%	117,932.4	100.00%

Cassava had the highest proportion of volume harvested with 49.0% while Yaqona had the highest proportion in total value of harvest and area planted by 71.7% and 77.4% correspondingly in Eastern Division.

PRODUCTION OF TEMPORARY CROPS IN WESTERN DIVISION

Table 4.9 reveals that Nadroga/Navosa Province dominated in area planted, area harvested, volume and value harvested of temporary crops in Western Division by 51.8%, 43.6%, 42.6% and 46.6% in that order. Followed by Ba Province and least contribution by Ra Province.

Table 4.9: Distribution of Areas, Production and Value of Temporary Crops in Western Division by Province

Division	Area Planted		Area Harvested		Volume Harvested		Value of Harvested Temporary Crop	
	Area (Ha)	%	Area (Ha)	%	Volume (Mt)	%	Value (FJD'000)	%
Ba	904.7	28.6%	1,728.4	29.1%	26,769.2	34.1%	82,493.1	34.44%
Nadroga/ Navosa	1,638.9	51.8%	2,554.5	43.0%	32,848.9	41.8%	110,345.4	46.07%
Ra	617.7	19.5%	1,653.9	27.9%	18,963.1	24.1%	46,681.7	19.49%

Cassava had the highest proportion of volume harvested with 67.2% while Yaqona had the highest proportion in total value of harvest and area planted by 78.9% and 77.4% correspondingly. Table 4.10 records the distribution of temporary crops in terms of plants, area, volume harvested and value by province in Western Division.

PRODUCTION OF TEMPORARY CROPS IN THE NORTHERN DIVISION

Table 4.11 reveals that Cakaudrove Province dominated in area planted, area harvested, volume and value harvested of temporary crops in Northern Division. Followed by Macuata with 28.0% in area planted, 22.6% in volume harvested while Bua Province had the second highest proportion in area harvested with 16.1% and value of harvest with 6.7%.

Table 4.11: Distribution of Areas, Production and Value of Temporary Crops in Northern Division by Province

Division	Area Planted		Area Harvested		Volume Harvested		Value of Harvested Temporary Crop	
	Area (Ha)	%	Area (Ha)	%	Volume (Mt)	%	Value (FJD'000)	%

During the census reference period, Yaqona found to be the most planted temporary crop with 64.3% of total area planted, 26.1% of total volume harvested, and 95.2% of total value of temporary crops in Northern Division. For Area planted, rice occupied the second highest proportion with 15.5%, followed by Dalo with 9.1%, cassava with 7.6%, Watermelon with 1.3% and others had used less than one percent of total area planted. Dalo recorded the highest volume harvested in the Northern Division with 30.8%, followed by Yaqona with 26.1%, Cassava with 20.0%, rice with 5.2%, watermelon with 4.6%, eggplant with 1.0% and others had less than one percent share to total volume harvested.

PRODUCTION OF TEMPORARY CROPS BY SEX OF HOUSEHOLD HEAD AT NATIONAL LEVEL

Table 4.13 analyses area and production of temporary crops by sex of the household head. It can be seen from the table that in Fiji during the Census reference period, the female headed households accounted for 5.5% of area planted, 3.8% of the area harvested, 4.4% of the volume of production and merely 2.0% of the total value of output of temporary crops.

Figure 4.13.1 and Figure 4.13.2 shows the top 10 commodities grown by a male and female headed household. Male headed households had cassava, dalo and yaqona as top grown temporary crops while female headed household had bele as the second grown crop than dalo. Also can be seen that female headed household plants more vegetables than root crops.

Figure 4.13.1 Top 10 Temporary Crops grown by male household head

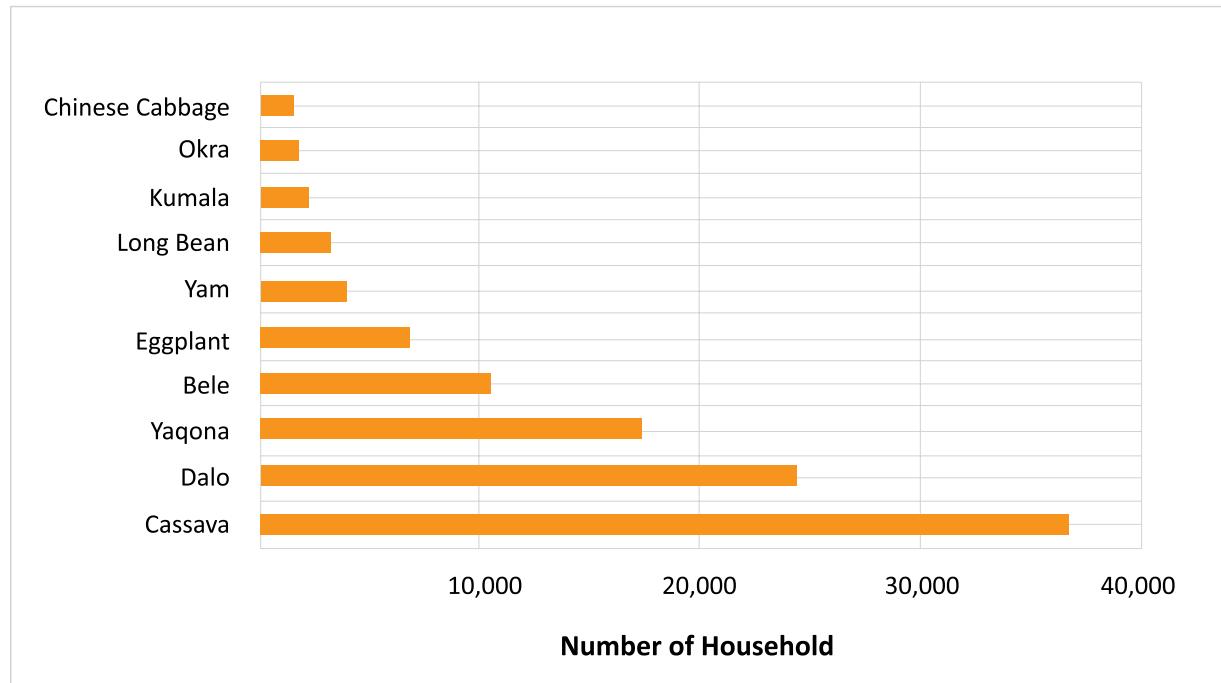

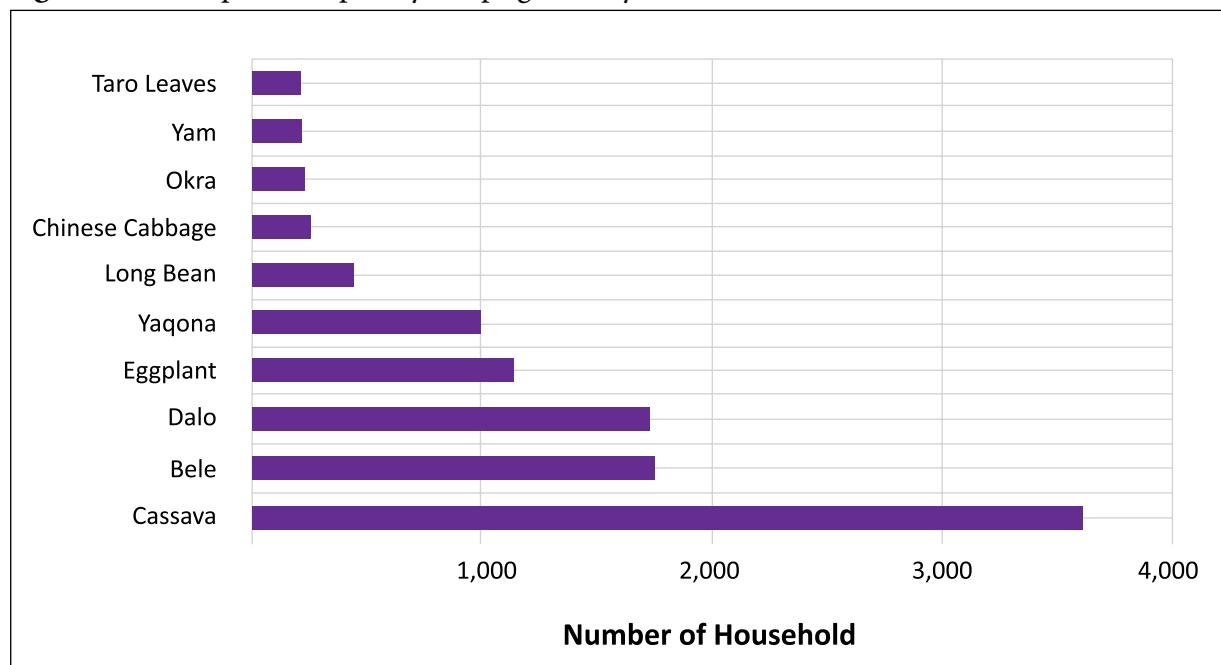

Figure 4.13.2 Top 10 Temporary Crops grown by female household head

PRODUCTION OF TEMPORARY CROPS BY AGE OF HOUSEHOLD HEAD AT NATIONAL LEVEL

Table 4.14 provides, among other things, volume and value of production of Temporary Crops in Fiji by age-group of head of the household. It can be seen from the table that, on an average, per hectare (harvested) value of output of temporary crops during the census reference period (10 February, 1999 – 10 February, 2020) is estimated at FJD 81,900. Analyzed by the age-group, it is noted that highest value of output per hectare is obtained by households with the household head in the age-group of 19 to 39 years at FJD 115,500 followed by age-group 10 to 19 years at FJD 86,300, age-group 59 years or over at FJD 66,800 and that by the households with heads in the age-group of 39 to 59 years at FJD 54,900.

PURPOSE OF HARVESTING

Table 4.15 presents information on number of farmers by purpose of harvesting of temporary crops. Though the table contains data on a large number of crops but the analysis is restricted only to Bele, Cassava, Dalo, Eggplant and Yaqona which have at least 5,000 growers. It may be seen that out of 12,293 farmers growing Bele, 89.3% used it for home consumption, 3.6% used for sale, 14.6% for gift and 9.6% for social obligations. Similarly in case of Cassava (40,495), Dalo (26,169), Eggplant (7,987) and Yaqona (18,478), the proportion of growers using for home consumption has been found to be 85.9%, 72.5%, 83.5%, 33.6%, for sale 24.3%, 37.3%, 12.8%, 59.9%, for gift 15.3%, 9.7%, 14.0%, 5.0% and for social obligations 28.4%, 29.9%, 4.0%, 21.6% respectively. It may be noted that sum total of percentages exceeds 100 as crops are generally used for more than one purpose.

C) PERMANENT CROPS

(i) Geographical Division

This is a straightforward section tabulating and giving, among other things, area planted and area harvested for permanent crops in the country. It can be seen in Table 4.16 that in the area planted, Northern had the highest proportion of 59.2%, followed by Western Division with 17.4%, Central Division with 12.4% and Eastern Division with 11.0%. Central Division seen to have less than ten percent which is the lowest share in volume harvested as well as 6.2% in Value of Harvest.

Table 4.16: Distribution of Areas, Volume of Value Harvested of Permanent Crops by Division in Fiji

Division	Area Planted		Area Harvested		Volume Harvested		Value of Harvested Permanent Crops	
	Area (Ha)	%	Area (Ha)	%	Volume (Mt)	%	Value (FJD'000)	%
Central	642.73	12.4%	234.29	4.2%	5,503.17	5.9%	10,124.86	6.2%
Eastern	568.68	11.0%	1,011.69	18.1%	10,555.96	11.3%	14,815.08	9.1%
Northern	3,074.94	59.2%	3,517.79	62.8%	44,797.23	48.2%	82,413.52	50.4%
Western	905.34	17.4%	834.18	14.9%	32,165.20	34.6%	56,258.64	34.4%
Fiji	5,191.7	100.0%	5,598.0	100.0%	93,021.6	100.0%	163,612.1	100.0%

Table 4.17 highlights the distribution of permanent crops in terms of area planted, area harvested, volume harvested and value of harvest across the four geographical divisions. Coconut found to have the highest proportion of volume harvested with 38.1%, followed by Pineapple with 30.8%, Other Permanent Crops with 16.6%, banana and pawpaw both had 4.2% , Plantain (Vudi) with 2.4%, Breadfruit with 1.4% and the remained permanent crops had less than one percent contribution to Total Volume harvested during the census reference period.

PRODUCTION OF PERMANENT CROPS IN CENTRAL DIVISION

Table 4.19 records Tailevu with the highest share in area planted at 57.3%, 57.5% on area harvested, 65.65 on volume harvested and 61.5% on value of harvest to the total. Followed by Naitasiri province with 21.5%, 19.8%, 20.0% and 22.7% of same distribution as Tailevu province. Namosi Province found to have the least across all variables.

Table 4.19: Distribution of Areas, Volume of Value Harvested of Permanent Crops in Central Division by Province

Province	Area Planted		Area Harvested		Volume Harvested		Value of Harvested Permanent Crop	
	Area (Ha)	%	Area (Ha)	%	Volume(Mt)	%	Value (FJD'000)	%
Naitasiri	138.07	21.5%	46.42	19.8%	1,099.24	20.0%	2,296.22	22.7%
Namosi	27.86	4.3%	6.60	2.8%	109.09	2.0%	234.30	2.3%

Serua	39.76	6.2%	21.05	9.0%	336.19	6.1%	826.75	8.2%
Tailevu	368.01	57.3%	134.81	57.5%	3,611.67	65.6%	6,224.77	61.5%
Total	642.7	100.0%	234.3	100.0%	5,503.2	100.0%	10,124.9	100.0%

Table 4.20 highlights the distribution of permanent crops across the five province in Central Division. Out of all the permanent crops harvested in Central Division, Pineapple recorded the highest proportion with 37.6%, followed by Banana with 25.8%, Coconut with 14.7%, Plantain (Vudi) with 11.4%, Breadfruit with 4.4% and other had a share of less than two percent. Area planted with coconut constitutes 33.0%, banana at 28.6%, pineapple at 10.4% and plaintain (vudi) at 11.5%.

Table 4.20: Permanent Crops by Province/Household/Plants/Areas/Volume and Value of Harvest in Central Division

PRODUCTION OF PERMANENT CROPS IN EASTERN DIVISION

In Eastern Division, interesting to see that Lau Province had the highest percentage in all measured areas of Permanent Crops in Table 4.21. This is followed by Lomaiviti province, Kadavu and Rotuma. In terms of area planted for permanent crops, Kadavu recorded the least with 3.2% while volume harvested and value showed smallest share of Rotuma Island.

Table 4.21: Distribution of Areas, Volume of Value Harvested of Permanent Crops in Eastern Division by Province

Province	Area Planted		Area Harvested		Volume Harvested		Value of Harvested Permanent Crop	
	Area (Ha)	%	Area (Ha)	%	Volume(Mt)	%	Value (FJD'000)	%

Rotuma	31.75	5.6%	20.99	2.1%	238.17	2.3%	207.16	1.4%
Total	568.7	100.0%	1,011.7	100.0%	10,556.0	100.0%	14,815.1	100.0%

Table 4.22 highlights the distribution of permanent crops across the five province in Eastern Division. Out of all the permanent crops harvested in Eastern Division, Coconut recorded the highest with 89.7% while the remained 10.3% was shared by other harvested permanent crops during the census reference period in Eastern Division. Coconut is mainly planted in the Eastern Division with 86.2%, followed by Braeafruit with 4.9%, Plantain with 4.3%, Banana with 2.15, Voivoi (Pandanus leaves) with 2.0% and others shared the 0.5%.

PRODUCTION OF PERMANENT CROPS IN WESTERN DIVISION

In Western Division, Ba Province recorded the highest in all measurable variables in Table 4.23, followed by Nadroga/Navosa province, with Ra province had the least share.

Table 4.23: Distribution of Areas, Volume of Value Harvested of Permanent Crops in Western Division by Province

Province	Area Planted		Area Harvested		Volume Harvested		Value of Harvested Permanent Crop	
	Area (Ha)	%	Area (Ha)	%	Volume (Mt)	%	Value (FJD'000)	%
Ba	320.57	35.4%	668.40	80.1%	25,947.46	80.7%	43,221.69	76.8%
Nadroga/Navosa	307.99	34.0%	96.27	11.5%	4,922.45	15.3%	9,836.93	17.5%
Ra	276.79	30.6%	69.51	8.3%	1,295.29	4.0%	3,200.02	5.7%
Total	905.34	100.0%	834.18	100.0%	32,165.20	100.0%	56,258.64	100.0%

Table 4.24 highlights the distribution of permanent crops across the five province in Western Division. Out of all the permanent crops harvested in Western Division, Pineapple recorded the highest with 77.8%, pawpaw with 9.25, banana with 6.35 and others shared the remained 6.8%. Banana largely occupied the area planted in Western Division with 27.3%, followed by coconuts with 16.5%, pineapple with 15.9%, pawpaw with 12.6%, vudi with 11.6% and 16.0% cultivated on other permanent crops.

PRODUCTION OF PERMANENT CROPS IN THE NORTHERN DIVISION

In Northern Division, Cakaudrove Province recorded the highest in all measurable variables highlighted Table 4.25. Bua Province had the second highest share in area planted with 24.4% followed by 20.1% of Macuata Province. For harvesting, Bua province recorded the least as compared to Macuata province.

Table 4.25: Distribution of Areas, Volume of Value Harvested of Permanent Crops in Northern Division by Province

Province	Area Planted		Area Harvested		Volume Harvested		Value of Harvested Permanent Crop	
	Area (Ha)	%	Area (Ha)	%	Volume (Mt)	%	Value (FJD'000)	%
Bua	748.51	24.4%	252.72	7.2%	3,444.51	7.7%	6,062.52	7.4%

PRODUCTION OF PERMANENT CROPS BY SEX OF HOUSEHOLD HEAD AT NATIONAL LEVEL

Table 4.27 analyses area and production of permanent crops by sex of household head. It can be seen from the table that in Fiji during the Census reference period, the female headed households accounted for 4.6% of area planted, 5.0% of the area harvested, 6.0% of the total value of output of permanent crops harvested.

	Total	10,109	100.0%

Figure 5.1 Distribution of Households involved in Raising Livestock by Province

Out of the total 22,991 livestock farming households in the country, 20.9% come from Central Division, 6.7% from Eastern Division, 44.0% from Western Division and 28.4% from Northern Division. During the Census reference period, 26.7% of livestock farming households in Fiji had dairy cattle, 28.3% had beef cattle, 11.0% had sheep, 35.6% had goat, 37.0% had pigs, 38.5% had poultry and 4.5% involved in apiculture. It may be noted that some total of proportions of different category of livestock farming households does not equal to hundred as some of the farmers may be farming more than one type of livestock. (See Table 5.1, 5.2 and Figure 5.1 and 5.1.2 for distribution of livestock farming household by Division & Province).

5.3 NUMBER OF STOCK

Geographical Division Level

Table 5.3 provides distribution of stock by type of livestock in different division and Table 5.4 records the breakdown of stock by at Province level. Out of the total 49,650 Dairy cattles in the country, 44.9% came from Western division, 40.5% from Central division, 13.6% from Northern division and 1.0% from Eastern division. The proportion of Beef cattle in Central, Eastern, Northern and Western divisions was 18.5%, 2.3%, 21.8% and 57.5% respectively. The distribution of Sheep in divisions in the same order was 2.7%, 1.9%, 47.7% and 47.7%. In case of Goat, different divisions in the same order accounted for 3.3%, 0.5%, 31.5%, and 64.8%. In the number of Pigs, Central, Eastern, Western and Northern divisions accounted for 43.8%, 17.6%, 26.4%, and 12.3% respectively. The distribution of Poultry was found to be 31.2%, 0.4%, 62.0%, and 6.5% in the same order.

Province Level

Table 5.4 records the breakdown of stock, birds and hives by at Province level. Out of the total 49,650 Dairy cattles in the country, 45.7% came from Ba Province, 22.8% from Ra Province and 31.4% shared with the remained 12 province. Nadroga/Navosa kept the highest percentage of Beef Cattles with 24.4%, followed by Ba Province with 18.7%, Ra with 14.4%, and other province shared the remained number of stock. With the total of 143,853 goat in the country, Ba had 41.7%, Macuata with 18.1%, Nadroga with 13.4% and 26.8% kept in other eleven province. Ba Province also recorded the highest percentage of pig, sheep, poultry birds and hives at the time of census.

MILK PRODUCTION AT HOUSEHOLD LEVEL AND PURPOSE OF PRODUCTION

This table gives information on quantity of milk production by the purpose of its use. The reference period for this table is last 3 months from the date of enumeration. Out of the total 6,144 farms involved in dairy farming, a total of 2,134,057 liters of milk was produced. As regards to the purpose of its production, 79.5% of the total milk produced was sold, 17.1% used for home consumption, 2.3% given away and 1.1% was rejected.

At Division level, Central produced 71.2% of total milk production, Western Division with 24.3%, Northern Division with 4.5% and Eastern Division with 0.03% in the last 3 months from the date of enumeration.

Figure 5.8.1 shows that Central and Western Division mainly produced milk for sale with 89.8% and 59.8% respectively while Eastern and Northern Division focused on home consumption with both had 78.5% and 74.0%. Eastern Division only produced milk for ohmne consumption, given away to relatives and had some volume of rejected milk.

C. Tables & Graphs

AGRICULTURE HOUSEHOLD PARTICIPATED IN FOREST ACTIVITIES IN THE LAST 12 MONTHS

Table 6.1 gives distribution of agricultural households which are involved in forest activities by sex of head of the household.

During the reference period of Agricultural Census 2020, a total of 70,991 agricultural households were reported in the country out of which 69,476 households, constituting 97.9% were involved in forestry activities. The 88.5% of households involved in forestry activities were headed by male whereas 11.5% were headed by female.

As regards to geographical division distribution of forestry households, 25.4% households came from Central division where 87.7% households were headed by male and 12.3% by female. Eastern division accounted for 8.4% of such households wherein the proportion of male and female headed households stood at 93.4% and 6.6% respectively. Western division, which accounted for 37.7% forestry households, had 86.4% households headed by male and 13.6% headed by female. A total of 28.6% forestry households were located in Northern division comprising 90.4% male headed and 9.6% female headed households.

B) AGRICULTURAL HOUSEHOLD MEMBERS WHO PARTICIPATED IN FOREST ACTIVITIES IN THE LAST 12 MONTHS

Table 6.2 presents distribution by sex of members of agricultural household who participated in forest activities in the last 12 months. Out of a total of 183,129 members, constituting 60.9% of members of agricultural households, participating in forestry activities, 25.8% came from Central division, 7.5% from Eastern division, 38.1% from Western division and 28.6% from Northern division. The proportion of male participants was found to be 51.8%, 54.3%, 51.2% and 53.3% in Central, Eastern, Western and Northern divisions respectively whereas proportion of female participants was 48.2%, 45.7%, 48.8% and 46.7% in the divisions in same order.

Figure 6.2.1: Distribution of Households Members Involved in Forest Activities by Sex

C) AGRICULTURAL HOUSEHOLD MEMBERS WHO INVOLVED IN FORESTRY ACTIVITIES AS PRIMARY AND SECONDARY OCCUPATION IN THE LAST 12 MONTHS

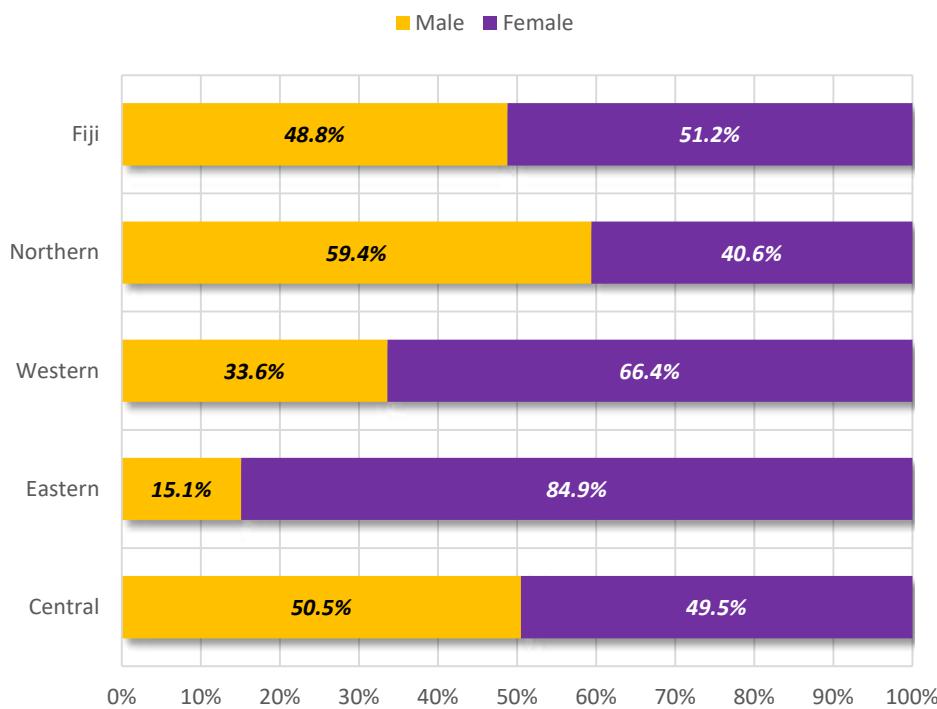

Table 6.3 gives geographical distribution of agricultural household members involved in forestry activities as their primary or secondary occupation. It is interesting to note that out of a total of 183,129 members, who reported their involvement in forestry activities, only 14,094 persons, constituting a small fraction of 7.7%, had forestry as their primary or secondary occupation.

Northern Division had the highest with 47.6%, Central Division with 31.7%, Eastern and Western Division with 13.0% and 7.7% respectively. Table 6.3 shows the dominance of female participation specifically for those that considered working on forest activities as either their primary or secondary activities in the last 12 months since the agriculture census (10th Feb 2020). This is mainly seen in Eastern and Western Division of which 84.9% and 66.4% proportion of female involvement compared to Central and Northern Division which recorded 50.5% and 59.4% involvement of male members.

Figure 6.3: Distribution of Households Members Involved in Forest Activities by Sex

Involved in Forest Activities as Primary and Secondary Occupation

Even among such members, a large majority of 82.0% had forestry as secondary occupation and only 18.0% reported forestry as their primary occupation (see Table 6.4). Further, among members who reported forestry as their primary occupation, only 13.6% were male and 86.4% were female. Similarly, among secondary occupation members, ratio of male and female stood at 56.5% and 43.5% respectively.

Members Involved in Forest Activities as Primary and Secondary Occupation by Different Forest Tasks Undertaken

Table 6.6 provides extent of deployment on different forestry activities of household members who reported forestry as their primary or secondary occupation. The table reveals that during the Census reference period, 7.9% of such members were engaged in Planting trees (eg. sandalwood, mahogany, etc), 33.8% in Planting Voiwoi, 4.7% in Planting Masi, 0.4% in Tree nursery work, 98.1% in Gathering firewood/Cutting tree branches, 31.8% in Harvesting wild food (eg Ota, etc), 3.8% in Harvesting of Masi, 31.6% in Harvesting of Voiwoi, 91.2% in Harvesting Wild Plants for Herbal Medicine, 18.3% in Handicraft, 6.1% in Selling Handicrafts, Wild Foods etc. and 0.2% in forest activities other than those described. It may be noted here that the sum total of percentages for different activities exceeds hundred as persons often work on more than one activity.

With Mobile Phones

Table 6.8 gives information on number of household members involved in forestry activities as Primary or Secondary Occupation and having mobile phone. It is seen from the table that out of a total of 14,094 household members involved in forestry activities as primary or secondary occupation, 38.8% (5,469) members had mobile phones. Out of the members having mobile phones, 64.3% were males and 35.7% were females. In regards to divisions, 44.0% members in the Central division were having mobile phones out of which 62.5% were males and 37.5% were females. In Eastern Division, 27.9% members had mobiles with 24.3% and 75.7% being male and females respectively. In Western division, 40.9% members had mobile with male, female break up at 41.9% and 54.1% respectively. In Northern Division, the mobile availability was 38.0% with male constituting 77.5% and females 22.5% of such members.

C. Tables & Graphs

AGRICULTURAL HOUSEHOLD PARTICIPATED IN FISHING ACTIVITIES IN THE LAST 12 MONTHS

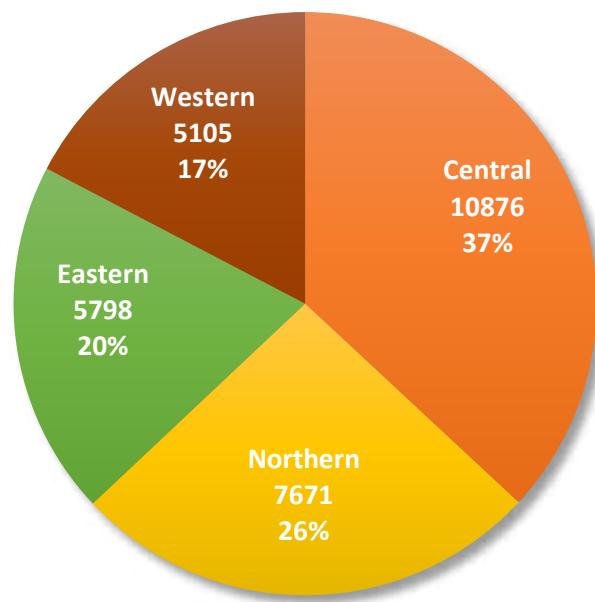

Table 7.1 gives distribution of agricultural households which were involved in fishing activities by sex of head of household. During the reference period of Agricultural Census 2020, a total of 70,991 agricultural households were reported in the country out of which 29,450 households, constituting 41.5%, were involved in fishing activities. The 89.9% of households involved in fishing activities were headed by male whereas 10.1% were headed by female.

As regards to geographical distribution of fishing households, 36.9% households came from Central division where 88.2% households were headed by male and 11.8% by female. Eastern division accounted for 19.7% of such households wherein the proportion of male and female headed households stood at 93.6% and 6.4% respectively. Western division, which accounted for 17.3% of fishing households, had 86.7% households headed by male and 13.3% headed by female. A total of 26.1% fishing households were located in Northern region comprising 91.7% male headed and 8.3% female headed households.

Figure 7.1: Distribution of Households Involved in Fishing Activities by Division in Fiji

AGRICULTURAL HOUSEHOLD MEMBERS WHO PARTICIPATED IN FISHING ACTIVITIES IN THE LAST 12 MONTHS

Table 7.2 presents distribution, by sex of members of agricultural household, who participated in fishing activities during the last 12 months. Out of a total of 69,711 members, constituting 23.2% of members of agricultural households participating in fishing activities, 39.6% came from Central division, 19.3% from Eastern division, 15.5% from Western division and 25.6% from Northern division. The proportion of male participants was found to be 51.8%, 54.3%, 56.2% and 55.1% in Central, Eastern, Western and Northern divisions respectively whereas proportion of female participants was 48.2%, 45.7%, 43.8% and 44.9% in the divisions in same order.

Figure 7.2.1: Distribution of Households Members Participated in Fishing Activities by Sex

AGRICULTURAL HOUSEHOLD MEMBERS WHO CONSIDERED FISHING AS PRIMARY AND SECONDARY OCCUPATION IN THE LAST 12 MONTHS

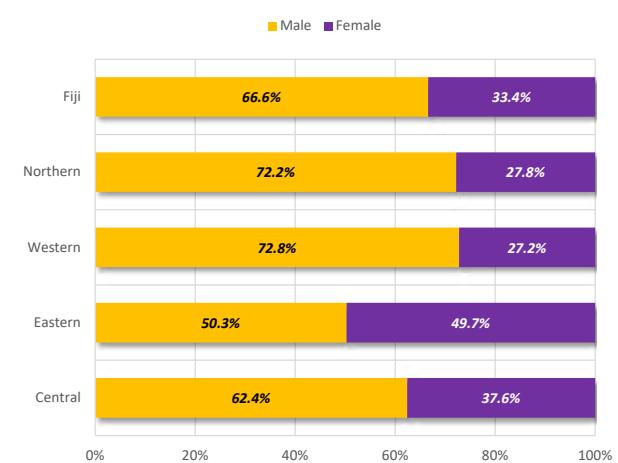

This table gives distribution of agricultural household members involved in fishing activities with fishing as primary or secondary occupation. It is interesting to note that out of a total of 69,711 member who reported their involvement in fishing activities, only 14,094 persons, constituting a small fraction of 6.5%, had fishing as their primary or secondary occupation. Northern Division had the highest with 44.5%, Central Division with 21.6%, Western and Eastern Division with 17.5% and

16.4% respectively. Table 7.3 shows the distribution of male and female fishers by Geographical Division.

Fiji	3,007	1,506	4,513

Members Involved in Fishing as Primary and Secondary Occupation by Sex

Among 14,094 members, 49.6% had fishing as primary occupation and 50.4% reported fishing as their secondary occupation. Further, among members who reported fishing as their primary occupation, 64.6% were male and 35.4% female. Similarly, among secondary occupation members, ratio of male and female members stood at 68.6% and 31.4% respectively. (See Table 7.4 below).

Fishing Activities performed by Members who considered Fishing as Primary or Secondary Occupation

Table 7.6 provides extent of deployment on different fishing activities of household members who reported fishing as their primary or secondary occupation. The table reveals that during the Census reference period, 79.7% of such members were involved in Inshore Fishing, 54.0% in Offshore Fishing, 16.9% in Fresh Water Fishing, 8.6% in Making fish products at home for sale (e.g. smoked fish etc.), and 7.6% in Selling Fish and other Fish Products. Only 0.2% of such members were involved in activities other than those described earlier. It may be noted here that the sum total of percentages for different activities exceeds hundred as members often work on more than one activity.

Source: Women in Fisheries Network

With Mobile Phones

Table 7.8 gives information on number of household members involved in fishing activities as Primary or Secondary Occupation and having mobile phone. It is seen from the table that out of a total of 4,513 household members involved in fishing activities as primary or secondary occupation, 51.7%(2,335) members had mobile phones. Out of the members having mobile phones, 78.8% were males and 21.2% were females. For geographical division distribution, 21.6% members in the Central division were having mobile phones out of which 73.7% were males and 26.1% were females. In Eastern division, 16.4% members had mobiles with 68.3% and 31.7% being males and females respectively. In Western division, 17.5% members had mobile with male, female break up at 78.4% and 21.6% respectively. In Northern division, the mobile availability was 44.5% with male constituting 84.7% and females 15.3% of such members.

CHAPTER 8:

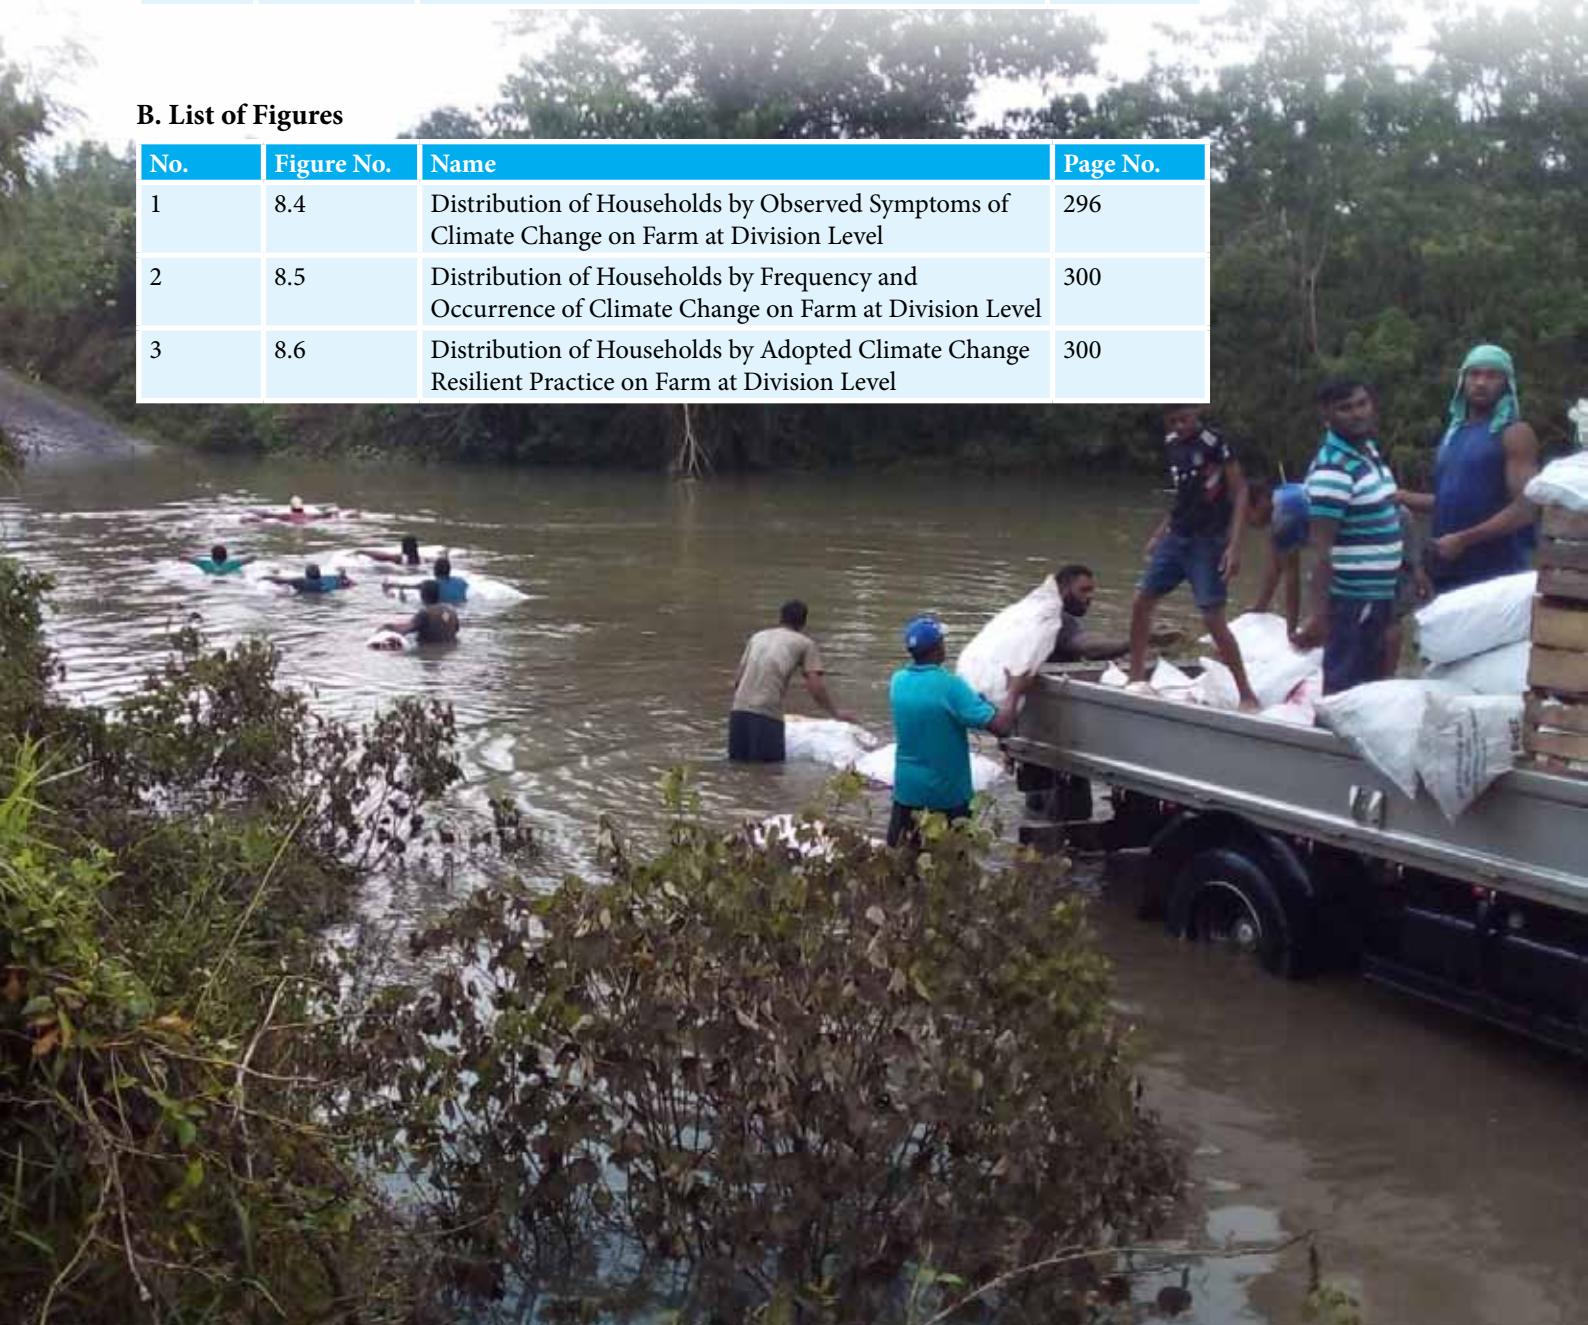

CLIMATE CHANGE

A. List of Tables

No.	Table No.	Table Name	Page No.
1	8.1	Number of Agricultural Household by Sex/ Understanding of Climate Change/National/Division	291
2	8.2	Number of Agricultural Household by Understanding Climate Change/National/Division/Province	291
3	8.3	Number of Agricultural Household by Sex/ Understanding of Climate Change/National/Division/ Province	292
4	8.4	Number of Agriculture Household who Observed Symptoms of Climate Change on their Farm (last 10 years)	294
5	8.5	Number of Agricultural Household by Type of Natural Disaster and Frequency of Occurrence/National/ Division/Province in the last 10 years	297
6	8.6	Number of Agricultural Household that Adopted Cli- mate resilient practices (last 10 years)/National/Division/ Province	300

B. List of Figures

No.	Figure No.	Name	Page No.
1	8.4	Distribution of Households by Observed Symptoms of Climate Change on Farm at Division Level	296
2	8.5	Distribution of Households by Frequency and Occurrence of Climate Change on Farm at Division Level	300
3	8.6	Distribution of Households by Adopted Climate Change Resilient Practice on Farm at Division Level	300

C. TABLES AND GRAPHS

Status of Understanding Climate Change

Table 8.1 gives number of agricultural households by awareness of climate change at Division level. During the reference period of 2020FAC, 75.2% agricultural households in Fiji reported having awareness about climate change whereas 20.6% reported as being somewhat aware. Only 4.3% households were found not having awareness about climate change and the remained households had no responds.

Table 8.1: Number of Agricultural Household by Sex/Understanding of Climate Change/National/Division

Division	Yes			No			Some		
	Male	Female	Total	Male	Female	Total	Male	Female	Total
Central	12,483	1,568	14,051	412	87	499	2,461	432	2,893
Eastern	4,818	283	5,101	119	18	137	571	56	627
Western	16,138	2,353	18,491	1,195	242	1,437	4,730	815	5,545
Northern	14,295	1,438	15,733	820	123	943	2,675	370	3,045
Fiji	47,734	5,642	53,376	2,546	470	3,016	10,437	1,673	12,110

As regards to regional distribution of 70,991 agriculture household, 77.9% in Central division, 85.5% in Eastern division, 69.1% in Western division and 77.8% households in Northern division were reported to be aware of climate change while 19.3% in Central division, 12.3% in Eastern division, 25.6% in Western division and 17.5% in Northern division were somewhat aware about climate change. Only a small proportion of 2.8%, 2.3%, 5.4% and 4.7% in Central, Eastern, and Western and Northern division respectively were reported being not aware of climate change.

Observed Symptoms of Climate Change

Table 8.4 gives information on number of agricultural households which observed symptoms of climate change over a period of last 10 years. Out of a total of 70,991 agricultural households, 48.9% reported to have observed loss of soil fertility, 49.1% observed decline in crop yield, 33.2% noticed spread of new pest and disease, 27.5% noted increased soil erosion, 28.4% found reduced water quality and supply, 43.3% observed change in cropping season, 66.9% experienced increased weather uncertainty and 59.4% increased drought. It may be noted that sum total of percentage of agricultural households having observed different symptoms of climate change exceeds hundred as households may have observed more than one symptom.

Figure 8.4: Distribution of Households by Observed Symptoms of Climate Change on Farm at Division Level

Frequency of Experiencing Natural Disasters

Table 8.5 presents information on frequency of experiencing natural disasters by agricultural household by type of natural disaster during last 10 years. The proportion of agricultural households which experienced Once or twice Waterlogging stood at 4.0%, Salt water intrusion at 1.2%, Bush Fire at 3.1%, Pest and Disease at 1.6% and others at 0.2%. The proportion of agricultural households which experienced these natural disasters once or twice most months, in the same order, stood at 1.2%, 0.6%, 1.7%, 0.1%, 2.7% and 0.1% while the proportion of households which experience these disasters once or twice most years stood at 3.6%, 1.2%, 3.9%, 1.5%, 7.3% and 0.4%. It may be noted that sum total of percentage of agricultural households having experienced natural disasters at a certain frequency may exceeds hundred as households may have experienced more than one natural disaster.

Figure 8.5: Distribution of Households by Frequency and Occurrence of Climate Change on Farm at Division Level

Adopted Climate Change Resilient Practices

Table 8.6 provides information on number of agricultural households that adopted various climate resilient practices to mitigate the impact of climate change during last 10 years. Out of a total of 70,991 agricultural households, 3.0% adopted Agroforestry, 3.9% began planting climate resilient crop varieties, 1.0% raised Climate resilient livestock breeds, 3.2% used recommended agriculture inputs, 20.8% adopted Crop rotation, 0.9% took Planting of mucuna cover (nitrogen fixing) crops, 6.1% started Contour Farming and 1.6% adopted Waste Product Management practices. It may be noted that sum total of percentage of agricultural households having adopted climate change practices may exceeds hundred as households may have adopted more than one resilient practice.

C. Tables & Graphs

USE OF MACHINERIES

Table 9.1 presents information on number of agricultural households those used machinery in the last 12 months. It can be seen from the table that during Agriculture Census reference period in Fiji, 14.2% of agricultural households used machinery out of which 10.4% were small machinery users whereas 3.8% used heavy machinery. As regards to divisions, the users of small machinery against the 70,991 agriculture households in Central, Eastern, Western and Northern divisions were 6.20%, 5.76%, 7.33% and 19.51% respectively. The proportions of users of heavy machinery in the regions were reported at 2.48%, 0.22%, 4.88% and 4.48% in the same order. Figure 9.1.1 and Figure 9.1.2 shows the distribution of 7,369 and 2,673 households that used small and heavy machineries respectively at Division level

Table 9.1: Number of Agriculture Household that used Machineries in the last 12 months/Division/Province

Division	Province	Small Machineries	Heavy Machineries
FIJI	Total	7,369	2,673
Central	Naitasiri	483	143
	Namosi	40	13

	Macuata	2,278	845
	Total	3,945	906

Note: Sum of number of Household using different type of machinery may not add to Total Number of HH as some HH may be using more than one type of Machineries

Figure 9.1.1: Distribution of Household that used Small Machineries (last 12 months) by Division

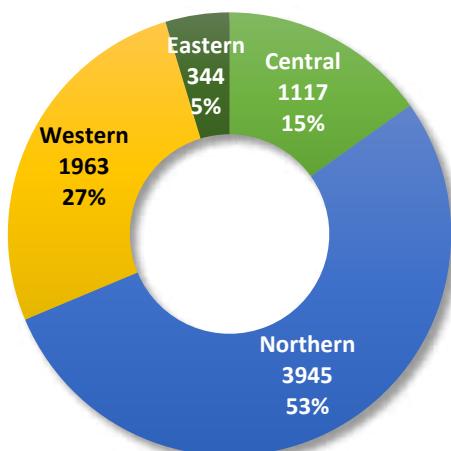

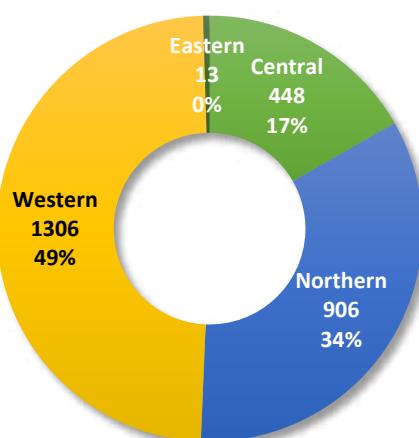

Figure 9.1.2: Distribution of Household that used Heavy Machineries (last 12 months) by Division

OWNERSHIP OF HAND TOOLS

Table 9.2 gives information on Number of Households those Owned Hand Tools during agriculture Census reference period in Fiji. It is reported that during reference period, 95.0% of agricultural households owned Cane Knife, 74.5% owned Fork, 61.7% owned Spade, 23.5% owned Hoe, 23.0% owned Post Hole Spade, 31.2% owned Axe, 19.5% owned Wheel Barrow, 27.2% owned Hand Operated Sprayer, 4.2% Water tank for irrigation / stock watering, 0.2% owned Apiculture hand tools (e.g., smoker, suit, comb, etc), 0.5% owned Hand operated poultry equipment (e.g., feeders, drinkers etc), 40.5% owned Rake and 22.2% owned Hose pipe. Only a small proportion of 0.9% owned hand toll other than those mentioned here.

Table 9.2: Number of Household that Owns Hand Tools/National/Division/Sex of Household Head/Division

OWNERSHIP OF SMALL MACHINERIES

Table 9.3 gives information on number of agricultural households that used small machineries by status and sex of ownership. Only a very small fraction of agricultural households have been reported using small machines, Only 0.1% of agricultural households were reported used mist blower, 4.5% used chainsaw, 0.3% irrigation water pump, 0.2% roto-tiller, 1.1% tractor implements, 0.3% used hand tractor, 0.3% electric and diesel generator, 0.04% used power tiller, 0.05% used honey extractor, 6.8% brush cutter and 0.03% used other small machines. However, most of the users were found to be owners. The proportions of owners among users were reported at 95.6%, 96.9%, 94.6%, 96.4%, 85.0%, 79.5%, 98.2%, 88.0%, 83.3%, 97.9% and 94.7% in the same order. The proportion of female owners of these small machines was reported to be 0.001%, 3.0%, 3.4%, 5.6%, 5.0%, 4.8%, 5.4%, 4.6%, 10.0%, 4.4% and 16.7% in the same order. (Refer to Volume 3 Gender Analysis Report for further detailed findings)

OWNERSHIP OF HEAVY MACHINERIES

Table 9.4 presents information on number of agricultural households that used heavy machine by status and sex of ownership during agricultural census reference period in the country. Like in the case of small machinery, heavy machine-using agricultural households have been found to form only a very small proportion. It has been reported that in Fiji, 3.2% agricultural households used tractor, 0.2% used digger, 0.4% used pick-up truck and 0.05% used rice harvester. Most of the users, however, were found to be owners. Out of the user household, the proportion of households owning these machines stood at 58.5%, 33.9%, 51.3%, 17.1% and 4.1% respectively. The proportions of female owners among users were reported at 58.5% for tractors, 2.4% for diggers and 2.2% for pickup trucks. For rice harvester no female ownership was reported.

Table 9.4: Number of Agricultural Household that used Heavy Machineries by Status and Sex of Ownership/National/Division

ACCESSIBILITY TO FINANCE

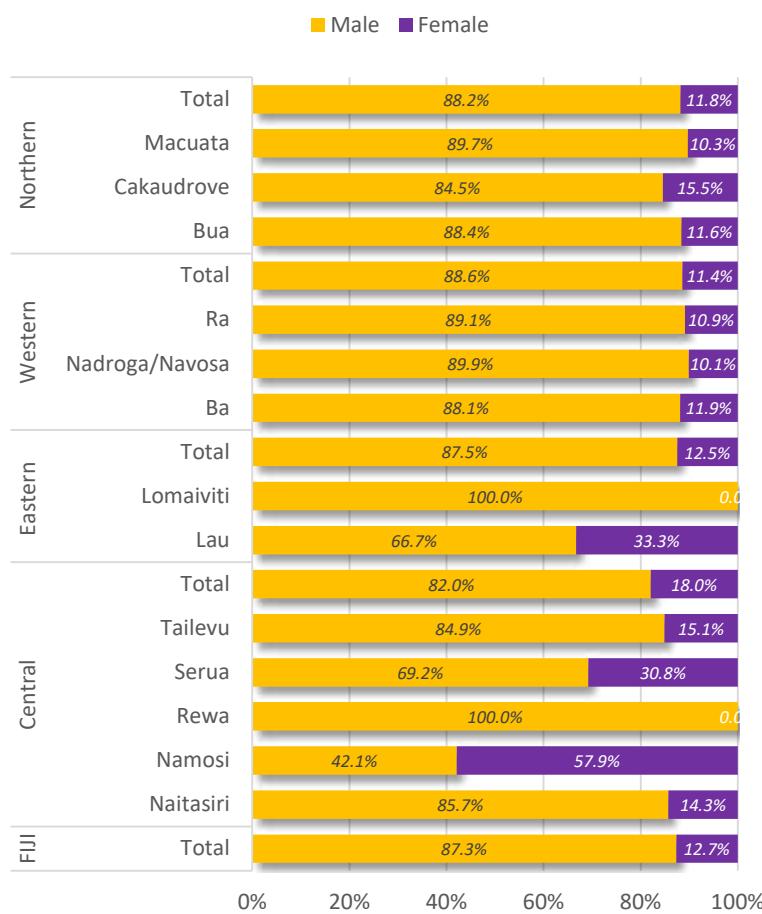

Table 10.1 presents information on number of agricultural households in Fiji that took agricultural loan / credit during last 12 months. It can be seen from the table that during Agriculture Census reference period, out of 70,991 agricultural households in Fiji, only 1,514 households, constituting 2.1% took agricultural loan. Out of the household members who took agricultural loan, only 12.7% were females and remaining 87.3% household members were males. The pattern in the regions was more or less similar. The proportion of agriculture households availing agricultural credit in Central, Eastern, Western and Northern regions was reported at 1.36%, 0.13%, 1.99% and 3.60% respectively. The proportion of female household members was reported to be 18.0%, 12.5%, 14.4% and 11.8% among agricultural credit availing household members in the divisions in the same order.

Figure 10.1: % Distribution of Sex of Agricultural Household Members that took Agricultural Loan in the last 12 months

Purpose of Acquiring Agricultural Loan

Table 10.2 presents distribution of farming households which took loan/credit by purpose of loan. The table reveals that 34.0% of agricultural households took loan for farm land purchase, 16.8% for planting materials/ new varieties of crops, 3.6% for replacement stock, 15.5% for purchase of fertilizer/ chemicals, 20.3% for purchasing tools / machinery, 9.9% for constructing farm buildings (animal housing/ storage/ nursery/processing facility), 9.1% for purchase/repair of farm vehicles, 15.9% for land clearing / preparation, 0.5% for forestry and 17.5% for other purposes.

Table 10.2: Number of Agricultural Household by Purpose of Loan/National/Division/Sex of Household Head

Division		Sex of Head of Household		Total Number of Farming Household which took loan/ credit		Farm land purchase		Planting materials		Purchase fertiliser/ chemicals		Purchase tools or machinery		Construct farm buildings (animal houseing/ storage/nursery/processing facility)		Purchase vehicles/Repair		Land clearing or preparation		Fisheries		Forestry		Others	
FIJI	Male	1,425	495	238	52	223	288	139	128	224	31	7	243

Note: Sum of number of Farms across different purposes may not tally with Total Number of Farms which took credit because some households might have taken credit for more than one purpose

ACCESSIBILITY TO AGRICULTURE SERVICES

Table 10.3 gives number of agricultural household by method of accessing agricultural services during last 12 months. The table reveals that 60,652 of 62,546 (96.4%) male headed farming households and 7,764 of 8,445 (91.9%) female headed households had accessed agricultural services. Out of the farming households which availed agricultural services, 19.8% accessed it through extension visit, 4.1% through training/ workshop, 53.7% through radio program, 31.3% through TV program, 15.3% through provincial/ district meeting, 12.3% through agriculture shows, 5.4% through roadshows, 6.5% through field days, farmer meetings/ other farmers, 14.3% through social media and 2.0% through other sources. The percentage of female farming households from these sources has been found to be 14.2%, 2.8%, 52.6%, 28.7%, 9.8%, 11.1%, 3.5%, 5.0% and 24.9% in the same order.

Table 10.3: Number of Farming Household by method of accessing Agricultural Services/National/Division/Province during last 12 months.

ACCESSIBILITY TO MARKET

Table 10.4 gives number of Agricultural household by main mode of transport from farm to market during last 12 months. The table reveals that 28,899 of 62,546 (46.2%) male headed farming households and 2,134 of 8,445 (25.3%) female headed households had accessed to market. Out of the farming households that accessed markets, 15.1% accessed it by Driving either a 4wd/truck or Car, 12.2% had to walk to the market, 5.3% by Canoe/small boat, 2.7% by Maritime vessels, 0.1% by Horse, 28.5% by bus, 32.0% by Carrier and 3.1% by other means.

CHAPTER 11: **FOOD INSECURITY**

A. List of Tables

No.	Table No.	Table Name	Page No.
1	11.1	Number of Agricultural Household by Frequency of Access to balanced meal (three times a day) /National/Division/Province/ Sex of household head during last 12 months	326
2	11.2	Number of Agricultural Household by Frequency of Access to balanced meal (three times a day) /Household Size head during last 12 months	328
3	11.3	Number of Agricultural Households by Sex of Household Head and Frequency with which households ran out of Food due to lack of money or other resources during last 12 months	332
4	11.4	Number of Agricultural Households by Size of Household and Frequency with which households ran out of Food due to lack of money or other resources during last 12 months	334

B. List of Figures

No.	Figure No.	Name	Page No.
1	11.1	% Distribution of Household by Frequency of Access to Balanced Meal/Division	328
2	11.4.1	Distribution of Household by Frequency of which Households ran out of Food due to Lack of Money	333

C. Tables & Graphs

ACCESS TO BALANCED MEAL (THREE TIMES A DAY)

Table 11.1 presents distribution of number of agricultural households by frequency of access to balanced meal (three times a day) during last 12 months from the date of enumeration. The table reveals that during this period in Fiji, 41.0% of agricultural households always had access to balanced meal, 53.5% had access some times and 3.6% never had access to balanced meal. If we categorize the households by sex of household head, it is found that the proportion of households having access to balanced meal works out to 42.3%, 52.6%, 3.6% for male headed households and 32.1%, 60.3%, 3.1% for female headed households having access always, sometimes and never respectively.

A more or less similar pattern is observed in divisions too. The proportion of agricultural households having access always, sometimes and never is reported to be 35.7%, 58.7%, 4.1% in Central division; 56.6%, 38.6%, 4.0% in Eastern division; 33.9%, 59.5%, 3.9% in Western division; and 50.8%, 45.4%, 2.5% in Northern division respectively. Thus, the data reveals that the female headed households were better placed in so far as access to balanced meal is concerned. It may be noted that sum total of percentages for different responses does not equal to hundred as some of the households refused to respond to this question.

Figure 11.1.1: % Distribution of Household by Frequency of Access to Balanced Meal/Division

Frequency of Access to balanced meal (three times a day) with Agriculture Household Size

Table 11.2 gives distribution of number of agriculture households by frequency of access to balanced meal (three times a day) by household size during last 12 months from the date of enumeration. The proportion of households having access always, sometimes and never is reported to be 33.7%, 58.7%, 3.0% for one person households; 40.7%, 53.2%, 3.6% for two to three person households; 41.5%, 53.5%, 3.6% for four to five person households; 42.5%, 52.9%, 3.6% for six to nine person households; and 45.3%, 51.2%, 2.8% for 10 or more person households respectively. This table reveals that household size does not affect the accessibility to balanced meal. It may be noted that sum total of percentages for different responses exceeds hundred as some of the households refused to respond to this question.

EXPERIENCED NO FOOD DUE TO LACK OF MONEY OR OTHER RESOURCES

Table 11.3 presents number of agricultural households by frequency with which households ran out of food due to lack of money or other resources during last 12 months from the date of enumeration. The table reveals that during this period in Fiji, 4.0% agricultural households often ran out of food due to lack of money or other resources, 32.2% ran out of food due to lack of money some times and 62.0% never ran out of food due to lack of money or other resources. If we categorize the households by sex of household head, it is found that the proportion of households which often, some times and never ran out of food due to lack of money or other resources works out to 3.8%, 31.3%, 63.4% for male headed households and 5.1%, 38.8%, 51.6% for female headed households respectively. It may be noted that sum total of percentages for different responses does not equal to hundred as some of the households refused to respond to this question.

Frequency of which Households ran out of Food due to Lack of Money with Agricultural Household Size

Table 11.4 presents distribution of number of agricultural households by size of household and frequency with which households ran out of food due to lack of money or other resources during last 12 months from the date of enumeration. The proportion of agriculture households which often, sometimes and never ran out of food due to lack of money or other resources is reported to be 5.4%, 38.3%, 51.8% for one person households; 4.0%, 33.0%, 60.5% for two to three person households; 4.1%, 31.7%, 62.9% for four to five person households; 3.4%, 30.3%, 65.4% for six to nine person households; 3.3%, 28.4%, 67.6% for 10 or more person households. Looked at in totality, in Fiji, 4.0% households often ran out of food due to lack of money or other resources, 32.2% some times and 62.0% households never ran out of food due to lack of money or other resources during the said 12 month period. It may be noted that sum total of percentages for different responses does not equal to hundred as some of the households refused to respond to this question. The remained number of households did not respond to the question.

ANNEXURES

ANNEXURE- 1

CONCEPTS AND DEFINITIONS USED FOR 2020 FAC

- **Statistical Unit** - A Statistical Unit for any data collection is the basic unit for which data is collected. For 2020 FAC, data was collected from the following statistical units – Farming Households and Institutional Farms (Agricultural Holdings) and Enumeration Area (Tikina Vou/ Small Districts)
- **Farm** - A Household or Institution (Agricultural Holding) that has land utilized for Agriculture (Crop, Livestock, and Fisheries & Forest). The land may be Owned, Leased, occupied with Traditional Arrangements or occupied and farmed with No Formal Arrangement for its use.
- **Agricultural Household/ Farming Household** - A Household is a small group of persons who share the same living accommodation, contribute their income and wealth to acquire certain goods and services and share the same eating arrangement. An “Agricultural Household” is defined as a household where the Main Economic Activity identified is farming i.e it practiced any Agricultural Activity viz. Crop, Livestock, Fisherries or Forestry during reference period of 2020 Agriculture Census.
- **Type of Agricultural holdings** - For 2020 FAC, there were two types of Agricultural Holdings covered: (i) Farming Households e.g. Households in villages and settlements that practice agricultural activities, and (ii) Institution Farms.
- **An Institutional Farm**- is defined as a Farming Unit managed or operated by cooperation, group of individual, Institution, or Government Agency without regard to Title, Legal Form or Size e.g. Naboro, Navuso Agriculture School, Village owned fish pond, Large Scale Farm etc. Enumerators were advised to consider the following criteria when identifying institutional farm:
 - I. **Ownership** : Consist of two or more individuals e.g. Village Projects
 - Government owned e.g. Naboro Correction Centre, Government Schools
 - Farms owned by Companies/Corporation e.g. Hotels, Large Estates
 - Large Scale Farms – e.g. joint ventures
 - II. **Farm Output**:
 - Farm Cash Income – standard and equally shared
 - Farm Non Cash Income - to benefit the community instead of individual household
 - Farm Produce – Crop, Livestock, Fisheries & Forest [fresh, no value added]
 - III. **Management**: The institutional farm should have a manager or chairperson as the head coordinated by a committee or board. It should have a standard administration arrangement. Institutional farm should be registered.
- **Primary Occupation** - The economic value (cash/non cash) of the activity and its impact to the wellbeing of the household should be considered. The activity with the highest cash/non cash value is the Primary occupation.
- **Land tenure** - Land tenure refers to the arrangements or rights under which the holder operates the land making up the holding. The following definitions on land tenure has been used -
 - **Freehold**: Land that the household holds a legal formal title to.
 - **Lease from the State (Crown Land)**: Land leased by the state or government
 - **Native Lease**: This refers to land operated with a lease arranged through the Native Land Trust Board (NLTB)
 - **Traditional Ownership (Mataqali, Tokatoka, Yavusa, and Kovukovu/ Kanakana)**: This refers to land operated through an arrangement with the village or land holding group. No rent is required to be paid
 - **Occupy iTaukei land with informal arrangement**: This refers to other informal arrangements such as gifts or in kind, that have been made with the village or land holding group
 - **Occupy without any legal arrangement**: This refers to squatting – where land is operated by farmer without ownership title and without paying any rent
- **Parcel, field and plot**: A holding parcel is any piece of land of one tenure type, entirely surrounded by other land, water, road, forest, etc. not forming part of this holding or forming part of it under a different form of tenure. A parcel may consist of one or more fields adjacent to each other. A field is a piece of land in a parcel separated from the rest of the parcel by easily recognizable demarcation lines, such as paths, and/or hedges. A field may consist of different plots. A plot is a part or whole of a field on which a specific crop or crop mixture is cultivated
- **Land use** - Land use refers to activities – such as growing crops, raising livestock or cultivating fish – carried out on the land making up the holding with the intention of obtaining products and/or benefits. In 2020 FAC, data has been collected for following land use categories –

- **Temporary Crops (Short Term Crops):** includes all land used for crops with less than one-year growing cycle; examples of temporary crops include vegetables and root crops. In this category area under vanilla, passion fruit, sugarcane and similar crops is not included, as these are classified as permanent crops. This refers to the physical areas of land on which temporary crops are grown (often referred to as net cropped area). The gross cropped area identifies the number of times the physical land area under temporary crop is planted in the last 12 months.
- **Fallow for one year or more:** Fallow land refers to arable land at prolonged rest for the last 12 months or more before re-cultivation
- **Permanent Crops (no pastures):** Land cultivated with long-term crops which do not have to be replanted for several years; e.g. coconut, avocado, papaya, yaqona (kava), pineapple, banana, vanilla, passion fruit, sugarcane etc.
- **Permanent Crops with pastures:** Land cultivated with coconuts or other permanent trees mixed with pastures for livestock grazing purposes
- **Temporary Meadows and Pastures (Supply Pastures):** Land temporarily cultivated with grasses or similar forage for mowing or pasture. Land would be classified under temporary meadows and pastures if it has been under such use for a period less than five years.
- **Permanent Meadows and Pastures:** - Land cultivated or naturally grown with herbaceous forage crops (grasses or similar forages) for mowing or livestock grazing purposes should be classified under this category if it has been under such use for a period of five years or more.
- **Livestock** - Livestock refers to all animals and birds kept or reared in captivity mainly for agricultural purposes. This includes Cattle, Horses, Sheep, Goats, Pigs as also Poultry and Bees.
- **Forest** - A large area covered mainly with trees and undergrowth is referred to as forest. WCA 2020 defines forest as land spanning more than 0.5 ha with trees higher than 5 metres and a canopy cover of more than 10 percent or trees able to reach these thresholds in-situ.
- **Aquaculture** - Aquaculture is the cultivation (farming) of marine organisms such as fish, molluscs (clams, mussels) crustaceans (prawns, lobster). Aquaculture activities mean regular stocking, feeding and protection from predators to increase the supply of the marine organism.
- **Climate change** - Climate change is defined as any significant long-term change in the expected patterns of weather of a region over a significant period of time. Climate change is about abnormal variations to the climate and the effects of these variations on different forms of life.
- **Agricultural machinery used** - refers to the use of machinery by the household wholly or partly for crop, livestock, fisheries or forestry purposes during census reference period. Equipment may be owned by the household or hired/borrowed from someone else.

Annexure- 2

Items captured for different themes for 2020FAC

1. **Household Composition;** Name of family member, sex, age, relationship to head of household, marital status, highest level of education, whether attended agricultural training, main economic activity (primary and secondary occupation), participation of member in agricultural tasks, functioning challenges, farmers with savings account and farmers who own mobile phones.
2. **Household Particulars;** Type of dwelling, type of building material used for outer walls of the house, main source of water supply, main type of lighting, main source of power supply, type of fuel used for cooking, type of toilet facility and household durables.
3. **Farm Land;** Number of farm land parcels, location of each parcel, Land Tenure, Type of Lease, Land Ownership, Land Area, Land Use Type, accessibility to farmland and type of irrigation.
4. **Crops on Farmland;** Type of crops, method of planting, crop farming area, production, market outlet, market price, farm inputs, sugarcane farming information.
5. **Livestock Farming;** Type of Livestock, livestock farming area, stock count, production, market outlet for sale, type of livestock feed and type of livestock services.
6. **Forestry;** Uses of Natural/Plantation forest, purpose of gathering or collecting forest products, type and age of timber species, whether own any tree nursery, deforestation for agriculture purposes and forest area damaged by natural disasters.
7. **Fisheries;** Type of fishing activity, type of fishing habitat/area, mode of transportation for fishing activity, type of fish, production and marketing.
8. **Aquaculture;** Type of aquaculture farming, type of water used for aquaculture farming, type of aquatic organisms, production, marketing and type of feed.
9. **Climate Change and Challenges;** Understanding of climate change, changes noticed on the farm, changes occurred on the farm, frequency of occurrence, type of farming practices adopted, species of agroforestry planted and main challenges to agricultural activities.
10. **Equipment;** Type of equipment, type and number of hand tools owned, type and number of small machinery owned, hired/borrowed and type and number of heavy machinery owned, hired/borrowed.
11. **Agricultural Services;** Accessibility to agricultural finance, accessibility to Government assistance and accessibility to market
12. **Food Insecurity;** Accessibility to balanced meal three times a day and accessibility to money or other resources

Annexure - 3

2020FAC Questionnaire Component and Linkage to SDG

Section	Purpose	Data Items	SDG Linkages
1. Household Composition	The purpose of this section is to determine Households that mainly relies on Agriculture as main economic activity, identify the population that considered farming or fishing or forest activity as their primary and secondary occupation and those that only assist in agricultural activities in Fiji. And also determine and analyze the role of women in agriculture sector. Data collected from this section is also useful in determining the frame for special gender surveys and other agricultural related surveys in the future.	Household Members – Sex, Relationship to Head, Age, Religion, Marital Status, Highest Education Completed, Mobile Contacts (Farmer, Fisher, Forester), Economic Activity (Primary Occupation, Secondary Occupation), Occupation Status, Involvement in Agriculture Activities, Savings, Attended any Agriculture Training, Functioning Challenges	      
2. Housing Particulars	Data collected in this section is useful for infrastructure development planning that could support the initiatives and plans of Government agencies in the Economic sectors in promoting economic growth, employment creation, reducing poverty and ensuring sustainability of livelihood of all Fijians who relies on Agriculture as their main economic activity. This section is also useful in identifying vulnerable areas in farming and depth of impact a disaster can create to farms and households and project identification process which measures the impact of farming in the well-being of every agricultural household.	Household- Type of House, Type of Building Material for Outer Walls, Main Source of Water Supply, Use for Cooking, Type of Toilet Facility, Household Durables	     
3. Land		Number of Piece of Land Operated by Household, Location of the Farm Land [Province, District], Land Tenureship, Land Ownership, Number of Years of Operating Land for Agriculture purpose, Land Area, Land Use Type, Accessibility to Farm Land	  

2020FAC Questionnaire Component and Linkage to SDG

Section	Purpose	Data Items	SDG Linkages
4. Crop Production	Data Collected in this section will be used as a sampling frame for crop surveys in the future and also a complete enumeration census provides an unique opportunity to determine the status and structure of crop farming in the country. Production data in an agricultural census are useful as benchmarks for current crop production statistics and determine the different utilization rate of harvested crops, and use of fertilizers and chemicals which is useful in assessing and analyzing its impact to the Environment.	Type of Crops, Method of Planting, Areas, Number of Plants, Production, Market, Type of Farm Input	     
5. Livestock	Livestock refers to all animals & birds kept or reared in captivity mainly for agricultural purposes. This includes cattle, horses, sheep, goats and pigs, as well as poultry and bees. This section covered all livestock that were raised on the household farm during the census period. The number of livestock is one of the essential items of the agricultural census, and is especially useful as a means of providing sampling frames for detail livestock surveys. Production data in an agricultural census are useful as benchmarks for current livestock production statistics. Items in this section will also provide data on the type of markets used by farmers, value of production, and proportion of production used for consumption and sales, type of feeds used, and veterinary services.	Type of Livestock, Method of Keeping Livestock, Stock Population, Production, Market, Livestock Feed & Services	    
6. Forestry		Type of Forest Areas, Uses of Natural/Plantation forest, Purpose of Harvesting, Type of Species planted on forest land, Number of years ago were the Natural/Planted Forest trees planted, Operated Nursery, Deforestation for farming purpose, Impact of Natural Disaster	   

2020FAC Questionnaire Component and Linkage to SDG

Section	Purpose	Data Items	SDG Linkages
7. Fishing	This section provides items that captured fisheries activities conducted at household level. It was not intended to cover the activities of large-scale commercial fishing enterprises. The items were collected either from fishers who also have agricultural farms, or for other households as well when conducting a wider agricultural census. In this census, the items would be collected for fishers who don't have farms and also fishers who have farms. In this case, the data collected should provide a complete frame of household capture fisheries activities or a complete picture of household fisheries in the country. These data would provide a more complete account of household fishing activities of the nation. Production data in an agricultural census are useful as benchmarks for current informal production statistics.	Usual area of collecting fish, Main Mode of Transportation to area of collecting fish, Methods of Fishing, Type of Fish, Production/Harvesting, Market	    
8. Aquaculture	Data collected in this section is useful for assessing food and nutrition security in Fiji, income generating activities in rural areas, and other economic indicators for both man and woman at different age groups in Rural Areas.	Type of Aquaculture farming practiced, Type of Water used for Aquaculture farming, Type of Aquatic Organisms, Production/ Harvest, Market and Feed	     
9. Climate Change	This section provided data on the farmers level of understanding on climate change, measures the level of Climate Change awareness platforms implemented by the Government agencies at the lowest administrative units per regions, impact of climate change and causes of changes by geographical areas, adoption of climate change mitigation practices by farmers and species of trees planted for agroforestry.	Understanding Climate Change, Noticed or Observed any change by type, Causes of Change, Frequency of Occurrence, Climate Adoption/ Mitigation Practice	

2020FAC Questionnaire Component and Linkage to SDG

Section	Purpose	Data Items	SDG Linkages
10. Equipment	<p>A broad concept of machinery and equipment is used for the agricultural census, covering all machinery, equipment and implements used as inputs to agricultural production. This includes everything from simple hand tools, such as a hoe, to complex machinery, such as a combine harvester. However, the main interest centers on farm mechanization.</p> <p>This section provided data on Inventories of all Farming Equipment's in the country, Baseline Information used for Impact/Damage Assessment of any Natural Disasters in the country, Baseline Information for providing Rehab-Assistance in terms of equipment's after disasters, Farm Mechanization areas, Ratio of Farm to Machineries by Geographical Areas that could be a challenge for moving towards Commercial Farming, Number of Farmers who owned, hired and borrowed hand tools, small machineries and heavy machineries, Total Value of Assets of the Agriculture Sector</p>	Types, Qty and Ownership of Hand Tools, Small Machineries and Heavy Machineries	 
11. Agriculture Services	Credit for agricultural purposes refers to any type of credit approved and available for purposes related to the operations of the agricultural holding. This includes credit for purchasing crop and livestock inputs, constructing farm buildings and purchasing farm machinery. Credit not related to agricultural operations, such as for construction of the holder's house, for other family businesses or for consumption expenditure, should be excluded. Data from this section can also be used as basis of evaluating Government (MoA) interventions over the years and status of farmers market accessibility in Fiji as we move towards commercialization	Accessibility to Agriculture Finance (Source, Purpose and Responsible member for Loan), Accessibility to Government Assistance, Accessibility to Market	 

2020FAC Questionnaire Component and Linkage to SDG

Section	Purpose	Data Items	SDG Linkages
12. Household Food Security	<p>Household food security refers to the situation in which all members of a household at all times are consuming enough safe and nutritious food for normal growth and development and for an active and healthy life. A household is food-insecure if it is not able to procure enough food or if its members are unable to eat adequate safe or nutritious food due to limited resources. Food insecurity refers to conditions related to a household not producing enough food and not having enough resources to buy.</p> <p>This section can produce information that can assist planners and decision makers in evaluating the level of intervention by the Ministry over the years through Programs that procures and distribute planting materials, seeds and seedlings to the farmers. Also, will assist in evaluating, modifying and aligning existing policies, strategies and programs that can improve food and nutrition security for all Fijians.</p>	<p>Have access to food to feed family a balanced meal three times a day?</p> <p>A time when a household ran out of food because of a lack of money or other resources?</p>	 

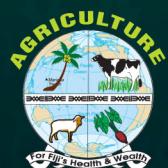

2020 FAC Data User Conference

Annexure - 4

Crops Name	Spacing Unit	No. of Plants/ Hectare	No. of Plants/ Acres	Expected Yield (Tons) / Ha	Expected Yield (Tons) /Ac
Amaranthus	0.5m x .15m	133,333	53,333	12	4.8
Avocado Pear	9m x 9m	13,333	5,333	12	4.8
Banana	3.3m x 1.8m	1,684	674	30	12
Bele	1m x 0.5m	13,400	5,427	12	4.8
Breadfruit	12m x 12m	69	28	30	12
Capsicum	0.75m x 0.4m	33,333	13,333	12	4.8
Cardamon	1.8m x1.8m	3,086	1,234	0.5	0.2
Carrots	0.5m x 0.2m	250,000	100,000	12	4.8
Cassava	1m x 0.5m	20,000	8,000	20	8
Cauliflower	0.75m x 0.4m	33,333	13,333	10	4
Celery	0.9m x 0.25m	44,444	17,777	10	4
Cherries	3m x 2m	1,666	666	6	2.4
Chillies	0.75m x 0.3m	44,444	17777.6	16	6.4
Chinese Cabbage	0.75m x 0.3m	44,444	17,777	12	4.8
Cinnamon	3m x 3m	1,111	444	2.5	1
