

THE PARLIAMENT OF THE REPUBLIC OF FIJI

MIMS Written Questions

30/ 2022

Can the Minister update Parliament on the progress of construction, rehabilitation and repair of the Serua landing and the Lomaloma jetty?

Serua landing is currently serviceable and the last maintenance was undertaken in July 2020. Currently, there is no plan to further upgrade this Jetty.

The Lomaloma Jetty is in the design stage of the jetties replacement program. The progress has been delayed due to COVID 19 restrictions as the design engineers are from Australia. The investigation works will recommence by May 2022 and the full design is expected to be ready for construction in December 2022. The construction is planned for commencement by March 2024 and this is dependent on the available budget.

Currently the jetty is only suitable for side berthing and maintenance works is being designed to prolong the service life of the Jetty by 5 years.
